Disclaimer

Numerical figures in the presentation have been subject to rounding adjustments. Accordingly, numerical figures shown as totals in various tables may not be arithmetic aggregations of the figures that precede them.

Trademarks and Service Marks

The Certara design logo, "Certara," and our other registered or common law trademarks, service marks or trade names appearing in this presentation are our property. Solely for convenience, our trademarks, tradenames, and service marks referred to in this presentation appear without the ®, TM, and SM symbols, but those references are not intended to indicate, in any way, that we will not assert, to the fullest extent under applicable law, our rights to these trademarks, tradenames, and service marks. This presentation contains additional trademarks, tradenames, and service marks of other companies that are the property of their respective owners. We do not intend our use or display of other companies' trademarks, trade names or service marks to imply relationships with, or endorsement or sponsorship of us by, these other companies.

Forward-Looking Statements

This presentation includes forward-looking statements within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995, that reflect the Company's current views with respect to, among other things, the Company's operations and financial performance. Forward-looking statements include information concerning possible or assumed future results of operations, including descriptions of our business plan and strategies. These statements often includes words such as "anticipate," "expect," "suggest," "plan," "believe," "intend," "project," "forecast," "estimates," "targets," "projections," "should," "could," "would," "may," "might," "will," and other similar expressions. We base these forward-looking statements or projections on our current expectations, plans and assumptions, which we have made in light of our experience in the industry, as well as our perceptions of historical trends, current conditions, expected future developments and other factors we believe are appropriate under the circumstances at the time. The forward-looking statements are based on our beliefs, assumptions and expectations of future performance, taking into account the information currently available to us. These statements are only predictions based upon our current expectations and projections about future events. Actual results may differ materially from those described in the forward-looking statements and are subject to a variety of assumptions, uncertainties, risks and factors that are beyond our control, including the acceptance of model-informed biopharmaceutical discovery and development by regulators, continued growth in R&D spend by our customers, outsourcing of services and technology by our customers, and the other factors detailed under the captions "Risk Factors" and "Special Note Regarding Forward-Looking Statements" and elsewhere in our Securities and Exchange Commission filings, and reports, including the Prospectus filed with the SEC on December 14,2020. New risks emerge from time to time and it is not possible for our management to predict all risks, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements we may make. Any forward-looking statement made by us in this presentation speaks only as of the date of this presentation and is expressly qualified in its entirety by the cautionary statements included in this presentation. We undertake no obligation to publicly update or review any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by any applicable laws. You should not place undue reliance on our forward-looking statements.

Non-GAAP Financial Information

This presentation contains "non-GAAP measures" that are financial measures that either exclude or include amounts that are not excluded or included in the most directly comparable measures calculated and presented in accordance with U.S. generally accepted accounting principles ("GAAP"). Specifically, we make use of the non-GAAP financial measures adjusted EBITDA, adjusted EBITDA margin, adjusted net income, and adjusted diluted EPS, which are not recognized terms under GAAP and should not be considered as alternatives to net income (loss) and GAAP EPS as measures of financial performance or cash provided by operating activities as a measure of liquidity, or any other performance measure derived in accordance with GAAP. The presentation of this measure has limitations as an analytical tool and should not be considered in isolation, or as a substitute for our results as reported under GAAP. Because not all companies use identical calculations, the presentations of these measures may not be comparable to other similarly titled measures of other companies and can differ significantly from company to company.

Adjusted EBITDA represents net income (loss) excluding interest expense, provision (benefit) for income taxes, depreciation and amortization expense, intangible asset amortization, equity-based compensation expense, acquisition and integration expense and other items not indicative of our ongoing operating performance. Adjusted EBITDA margin represents adjusted EBITDA divided by revenue. Adjusted net income and adjusted diluted EPS exclude the effect of the same items noted above with respect to adjusted EBITDA from GAAP net income (loss) and GAAP EPS, respectively, as well as adjust the provision for income taxes for such charges. You should refer to the appendix at the end of this document for a reconciliation of these non-GAAP measures in specific periods to their most directly comparable financial measures calculated and presented in accordance with GAAP for those periods.

Management uses various financial metrics, including total revenues, income from operations, net income, and certain non-GAAP measures, including those discussed above, to measure and assess the performance of the Company's business, to evaluate the effectiveness of its business strategies, to make budgeting decisions, to make certain compensation decisions, and to compare the Company's performance against that of other peer companies using similar measures. In addition, management believes these metrics provide useful measures for period-to-period comparisons of the Company's business, as they remove the effect of certain non-cash expenses and other items not indicative of its ongoing operating performance. Management believes that these metrics are helpful to investors, analysts, and other interested parties because they can assist in providing a more consistent and comparable overview of our operations across our historical periods. In addition, these measures are frequently used by analysts, investors, and other interested parties to evaluate and assess performance. In evaluating adjusted EBITDA, adjusted net income, and adjusted diluted EPS, you should be aware that in the future the Company may incur expenses similar to those eliminated in this presentation and this presentation should not be construed as an inference that future results will be unaffected by unusual items.

CERTARA

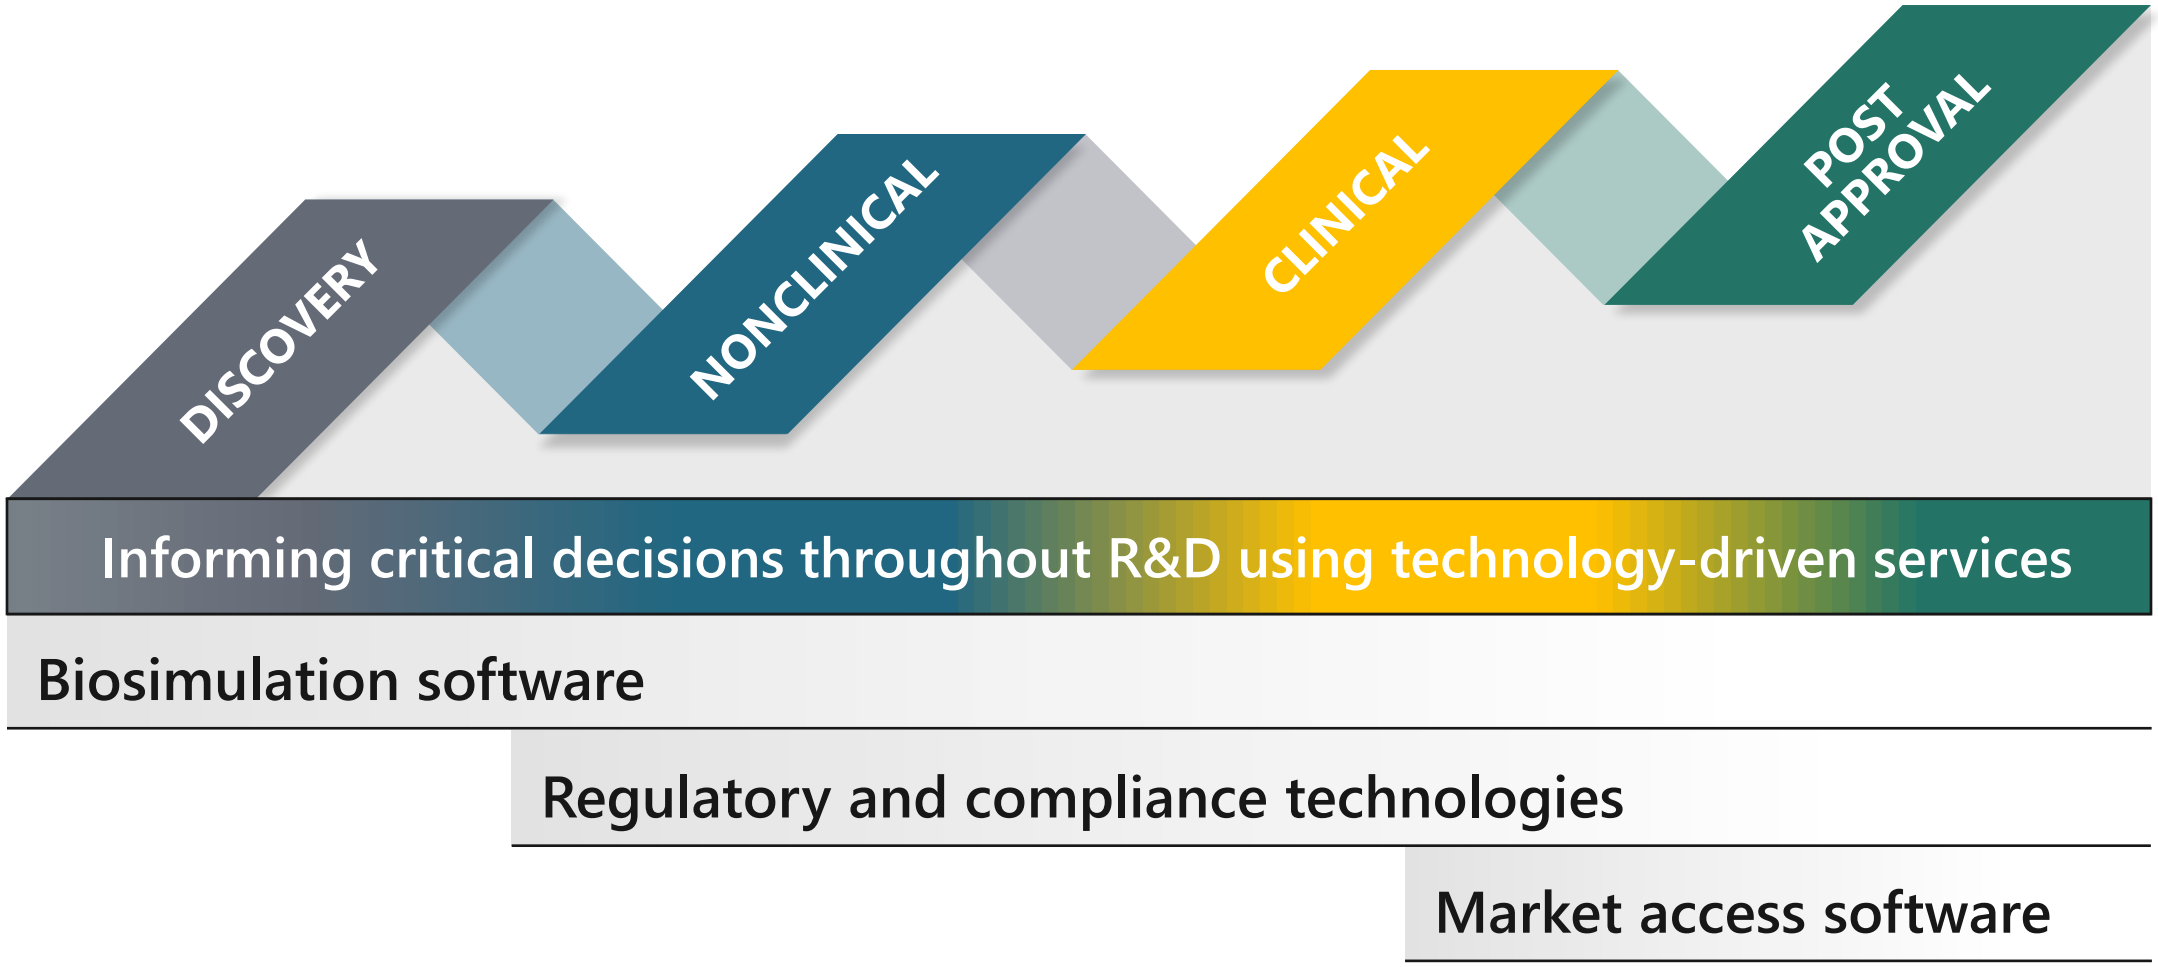
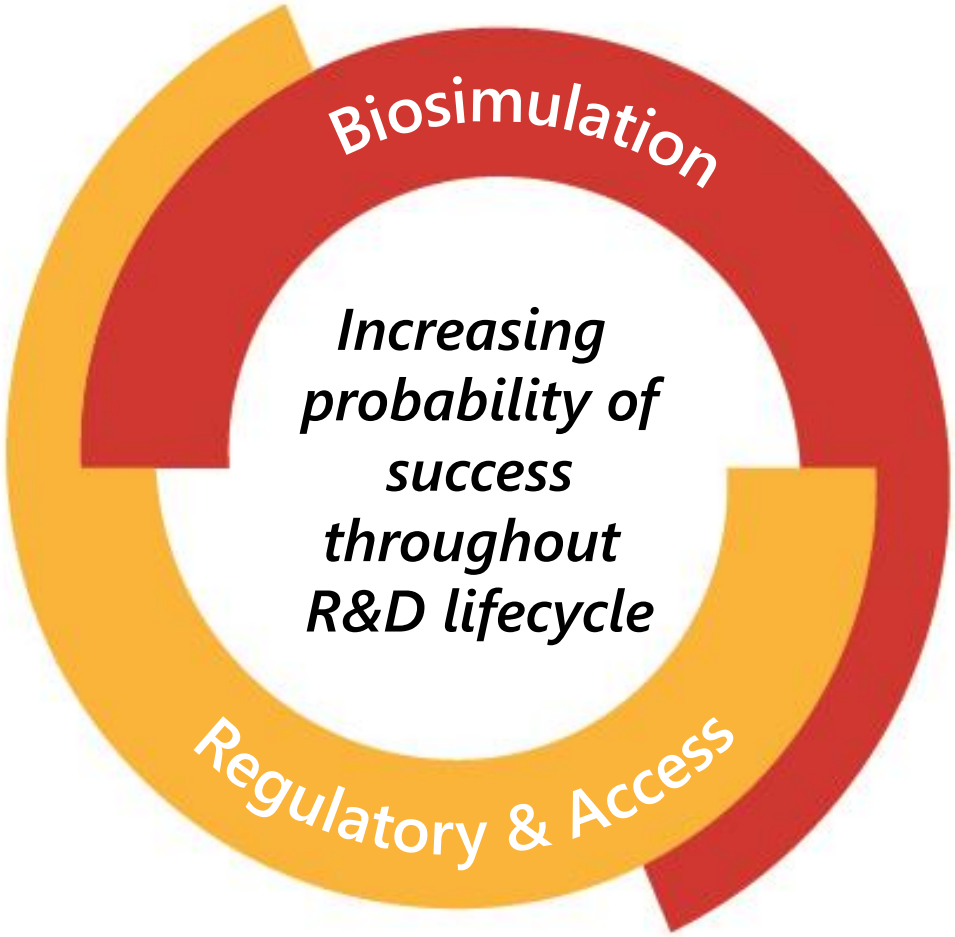
Accelerating medicines using biosimulation and technology



CERTARA

Advancing drug programs with our suite of solutions



Biosimulation is applied throughout R&D and integrated into regulatory strategy and submission

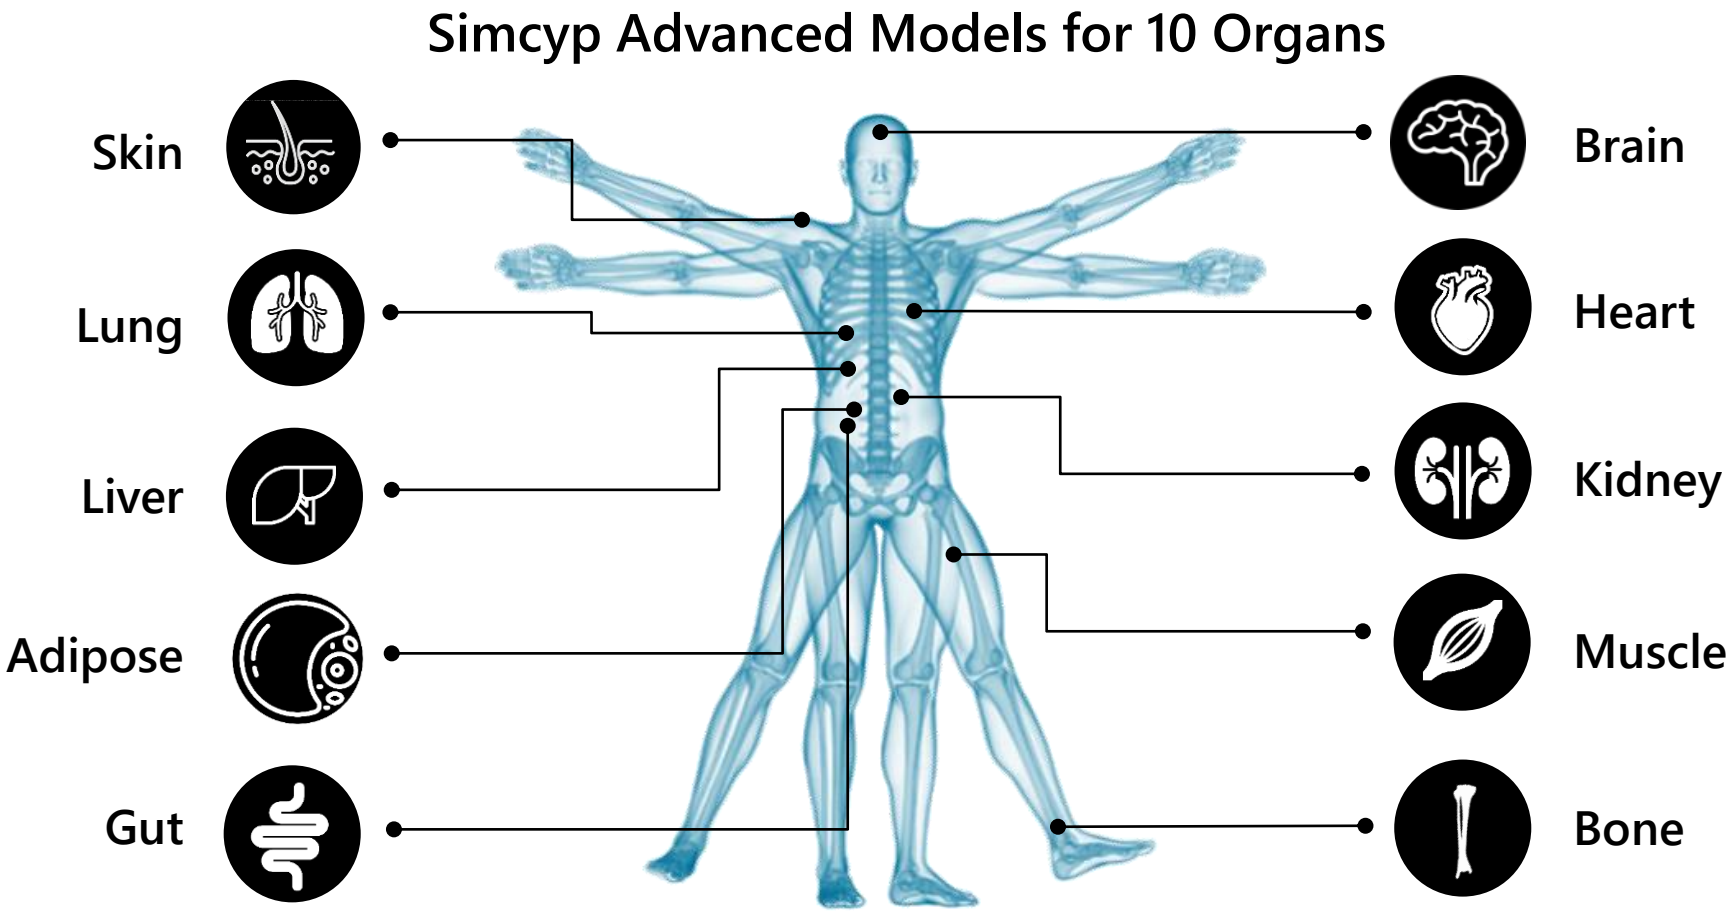
Technology-driven **regulatory science** improves quality, delivers scalability and expedites the submission process

Modeling and analytics help to understand and incorporate real-world impact in **value assessment** and **market access decisions**

CERTARA

Predictive power of biosimulation

Biosimulation uses computer-based models of biological systems to predict how the body affects the drug and how the drug affects the body.



CERTARA

Streamlining trials and optimizing outcomes

Biosimulation Use Case Examples

Discovery	• Improve target selection • Identify safety risks early
Nonclinical	• Replace, reduce and refine animal studies • Inform design of subsequent experiments
Clinical	• Determine first-in-human dosing • Waive drug interaction studies • Optimize dosing for special populations • Streamline or waive bioequivalence studies

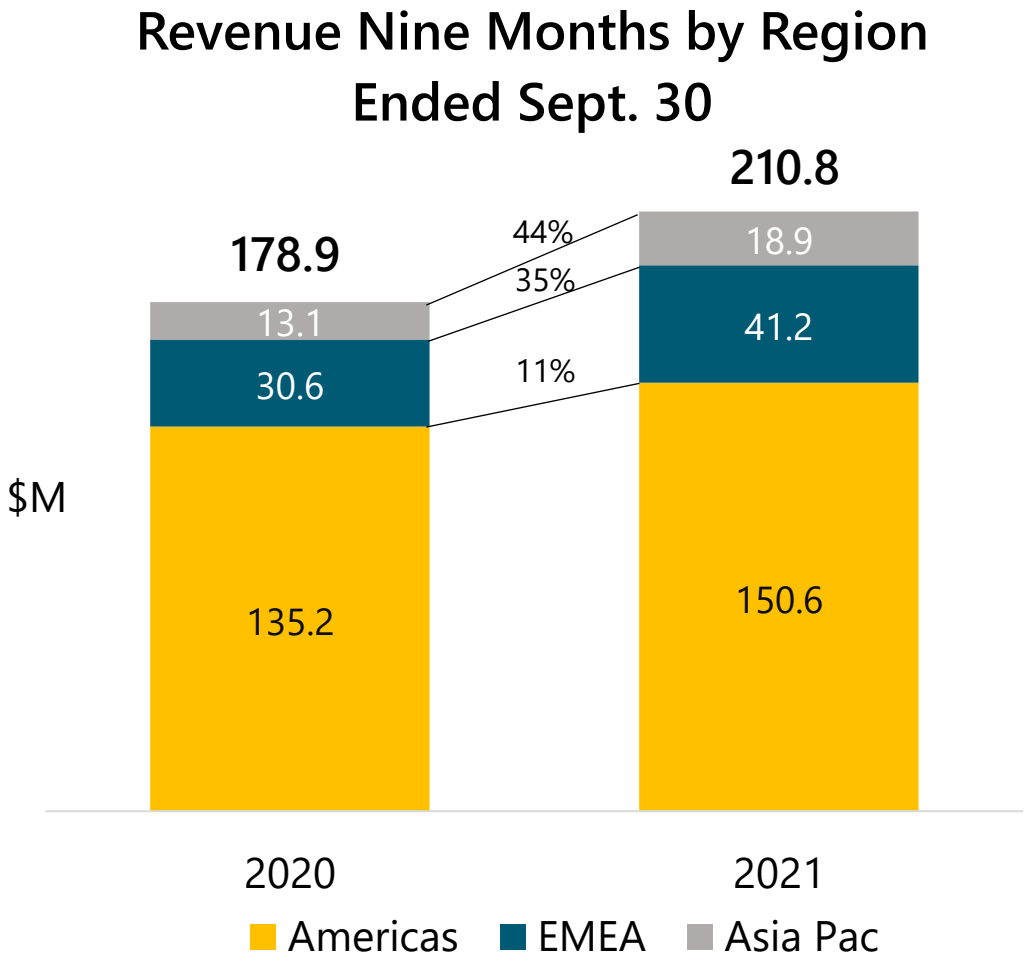
Benefits

- ✓ Fail faster
- ✓ Streamline or waive animal and human studies
- ✓ Help increase safety and efficacy
- ✓ Cut time and cost

CERTARA

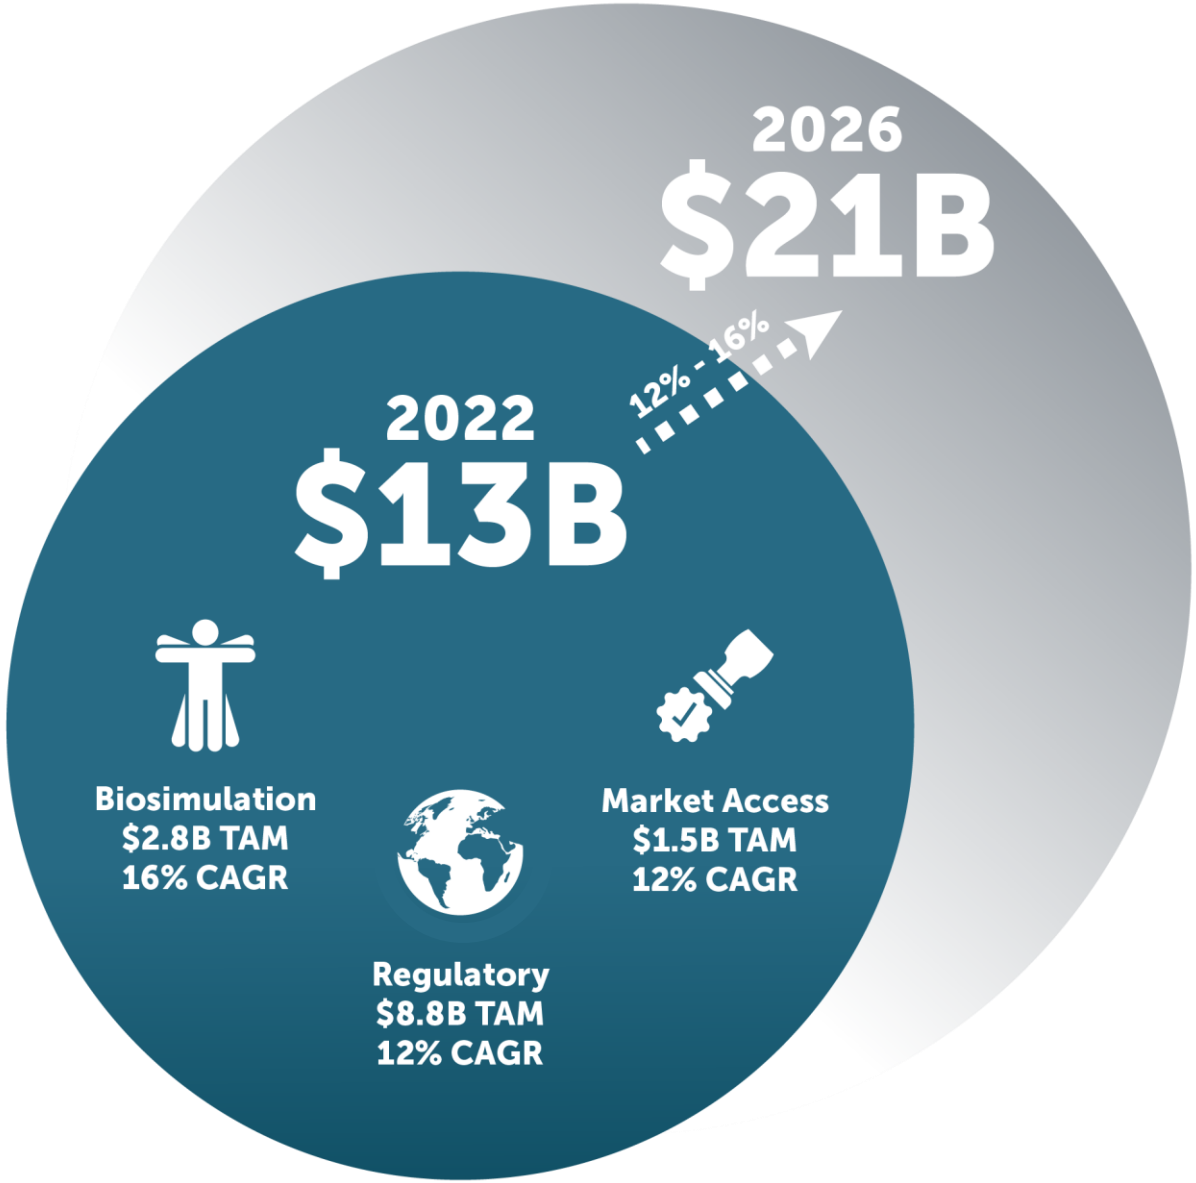
Differentiated strengths fuel global expansion

- Proprietary end-to-end software platform
- Biosimulation software adopted by 17 regulatory agencies
- Embedded in customers' R&D process with 90% renewal rate
- Scalable service model powered by technology and leading experts



CERTARA

Large, growing end markets



Market Drivers

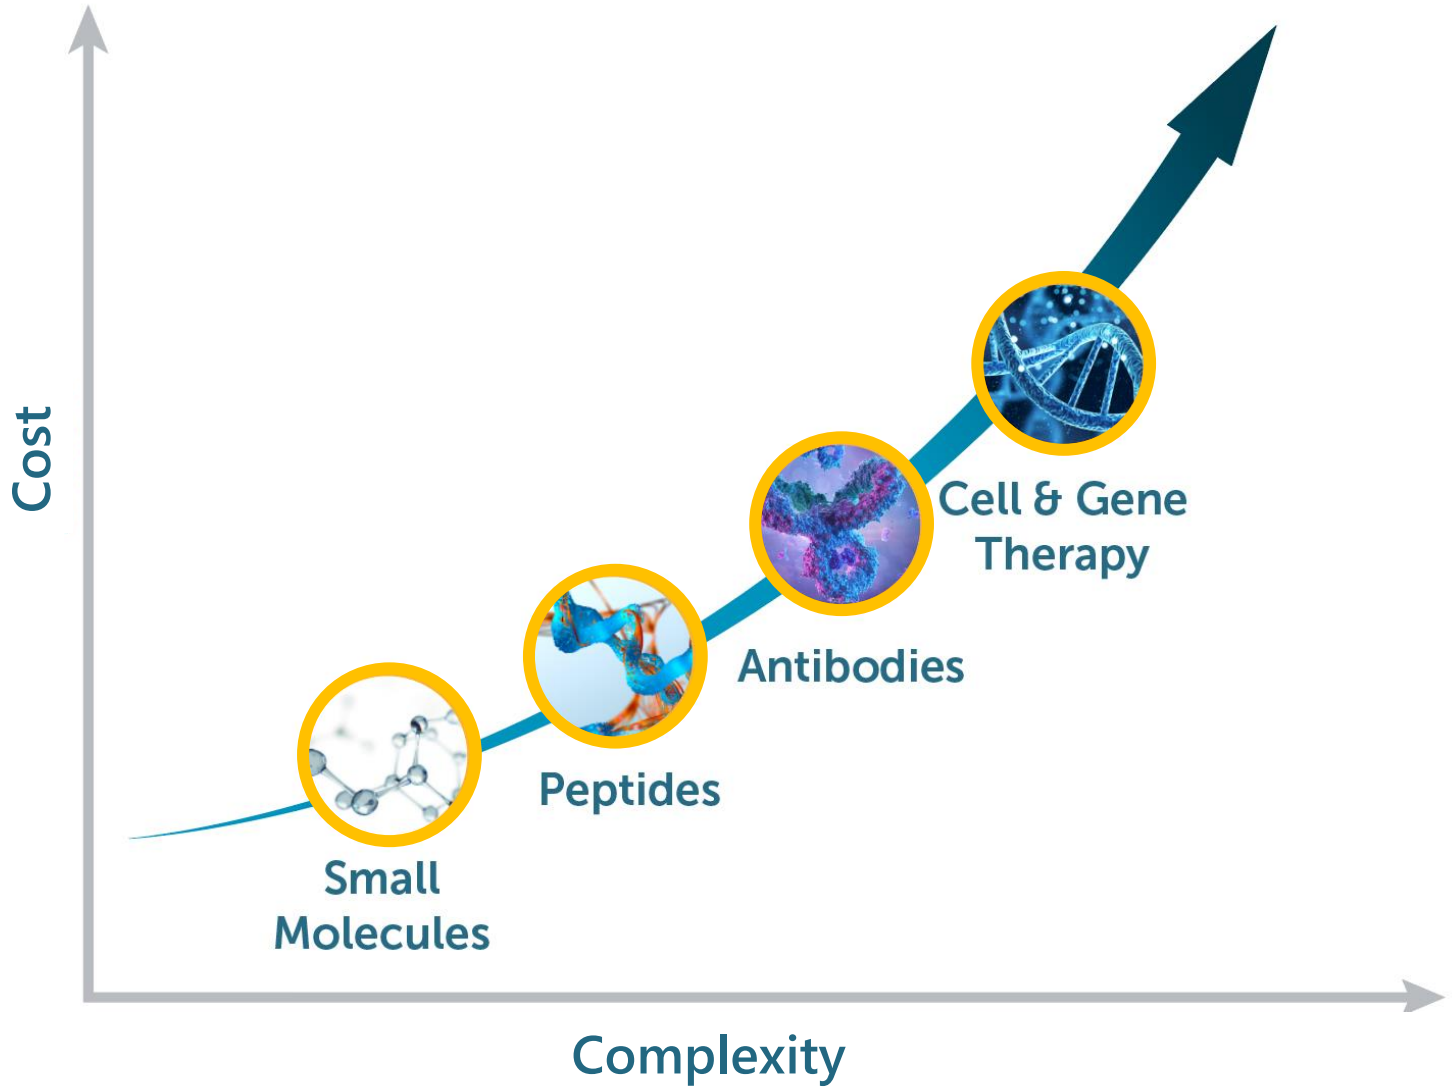
Global regulatory support

Biotech growth

Outsourcing

CERTARA

Drug R&D grows in complexity and cost

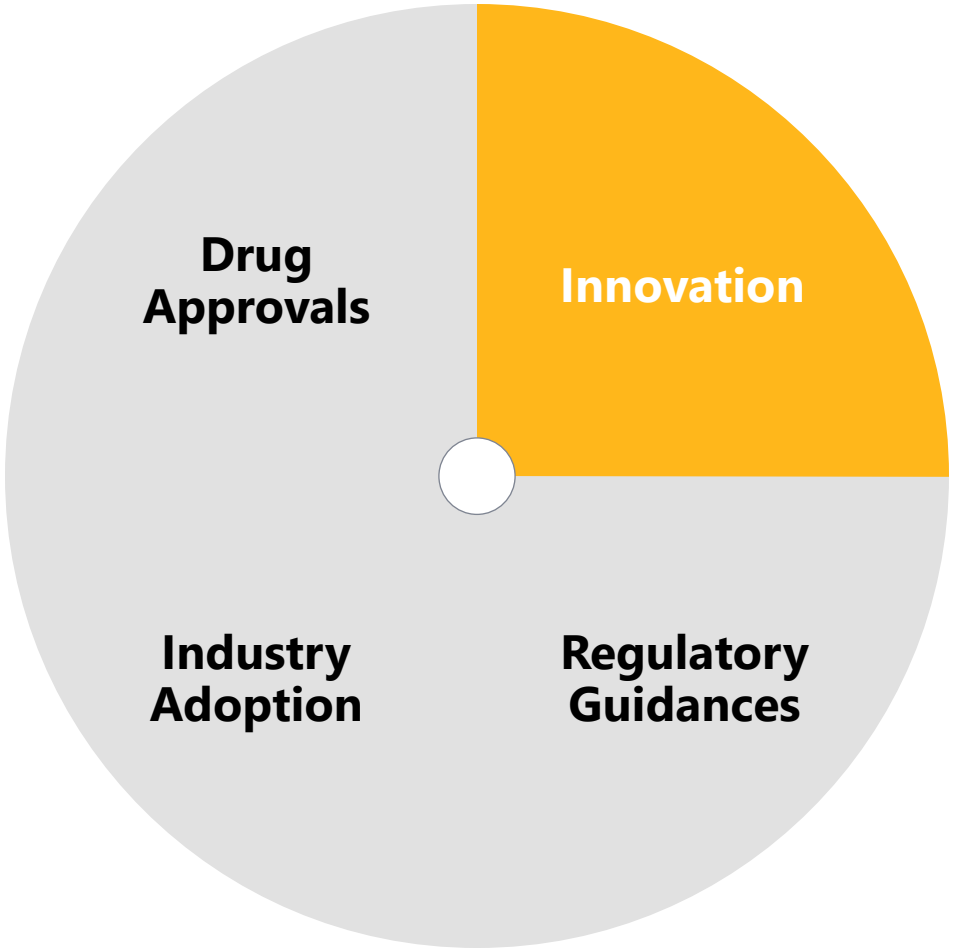


- Cost of development grows with complexity of compound
- Clinical phase times are increasing
- Biologics comprise 43% of the R&D pipeline
- Complex generics also pose development challenges

CERTARA

Powerful flywheel effect fuels momentum and adoption

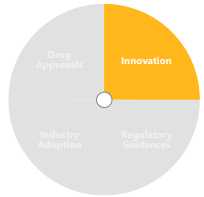
Regulatory / Industry Flywheel Effect



New technology and biosimulation models **expand use cases**

CERTARA

Driving innovation – 10 new products and updates in 2021



Regular cadence of new software launches and new capabilities to expand use cases

Simcyp™ Simulator
Versions 20 and 21

- Immuno-oncology
- Immunogenicity

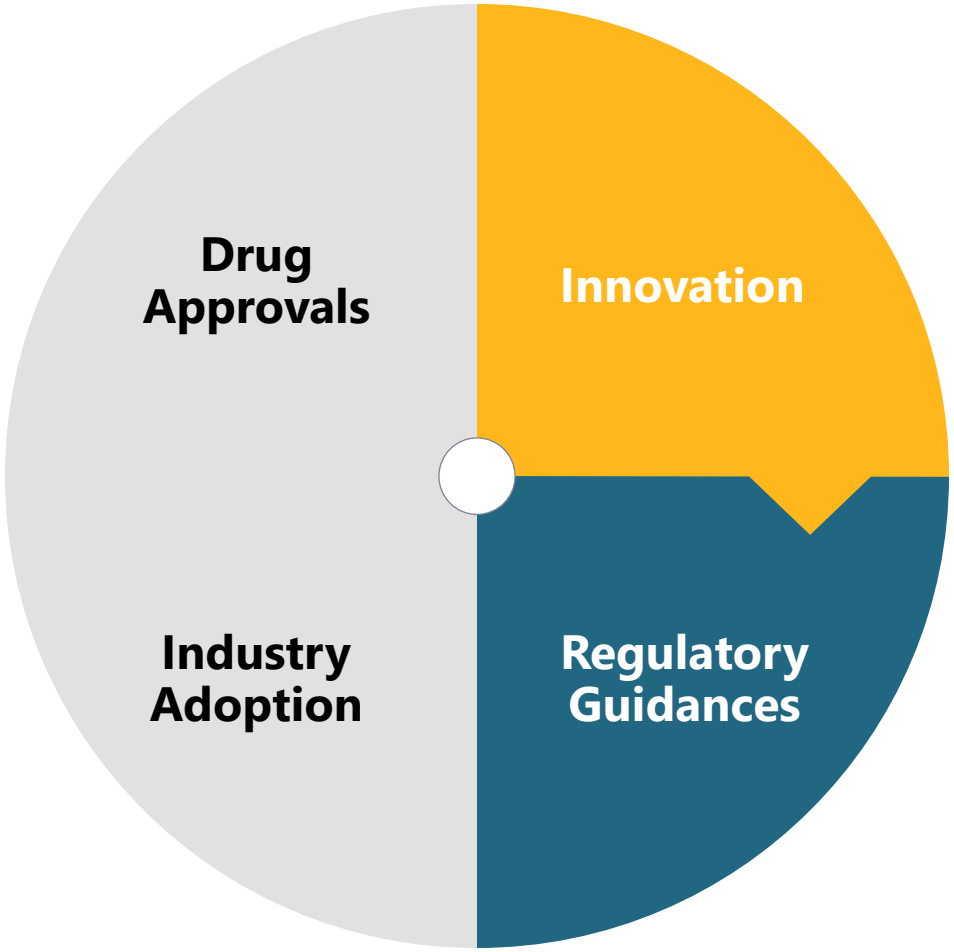
Regulatory / Industry Flywheel Effect

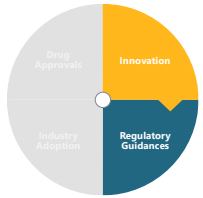


New technology and biosimulation models **expand use cases**

Global regulatory guidances and workshops educate industry and advance use of biosimulation

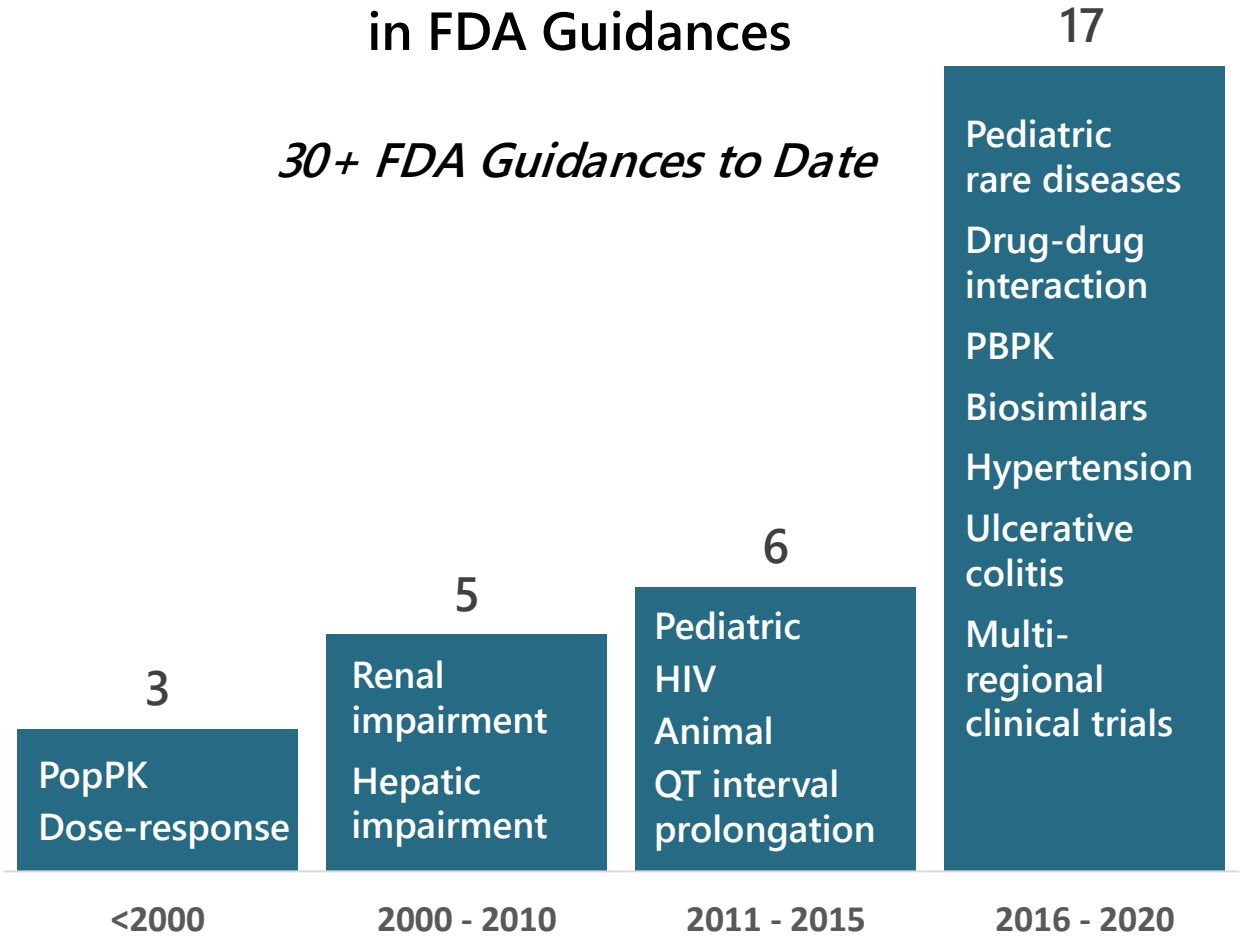
CERTARA

Increasing regulatory adoption



Incorporation of Biosimulation in FDA Guidances

30+ FDA Guidances to Date



2021 FDA Focus Areas of Regulatory Science

Model-informed product development aims to integrate information from diverse data sources to **help decrease uncertainty and lower failure rates, and to develop information that cannot or would not be generated experimentally.**

MIDD applications in the report include:

- Predicting clinical outcomes
- Informing trial designs
- Supporting evidence for efficacy
- Optimizing drug dosing
- Predicting product safety

CERTARA

Powerful flywheel effect fuels momentum and adoption

Regulatory / Industry Flywheel Effect

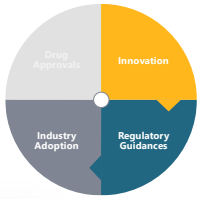
New technology and biosimulation models **expand use cases**

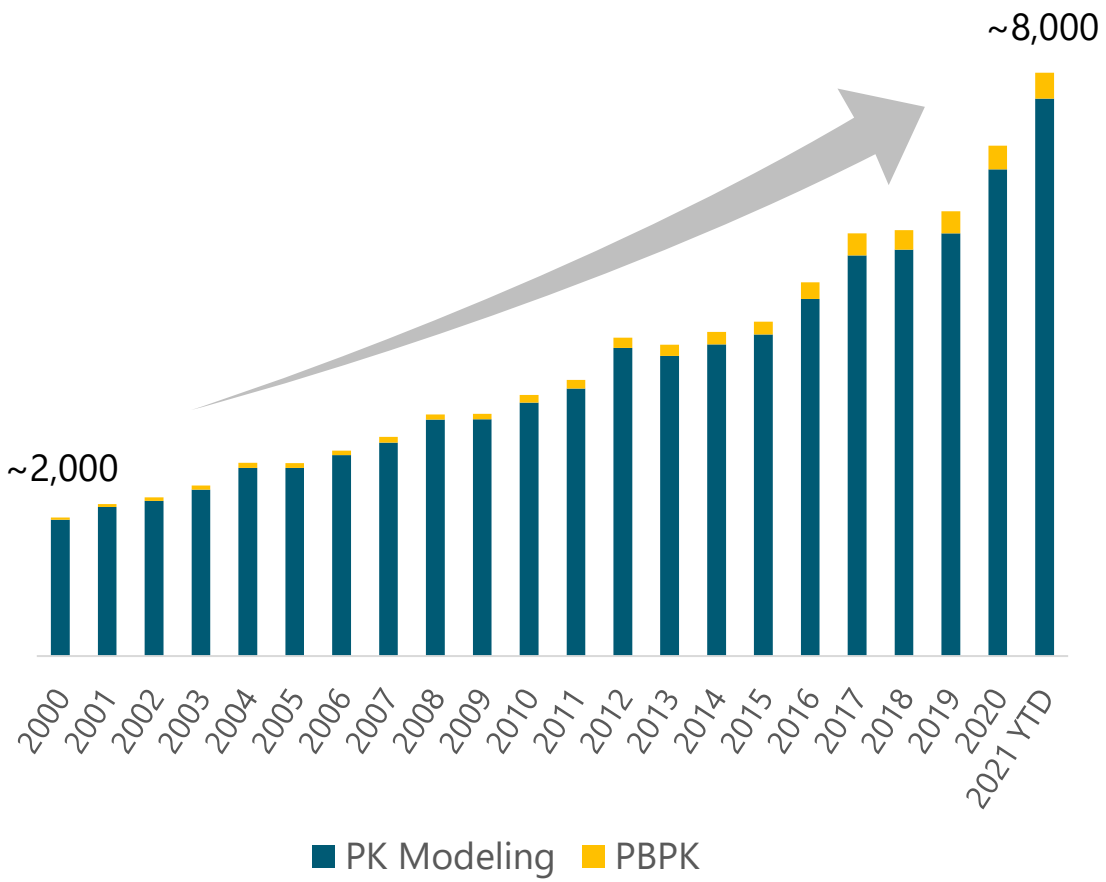
Biopharmaceutical companies **use biosimulation and technology-driven services** to accelerate R&D programs

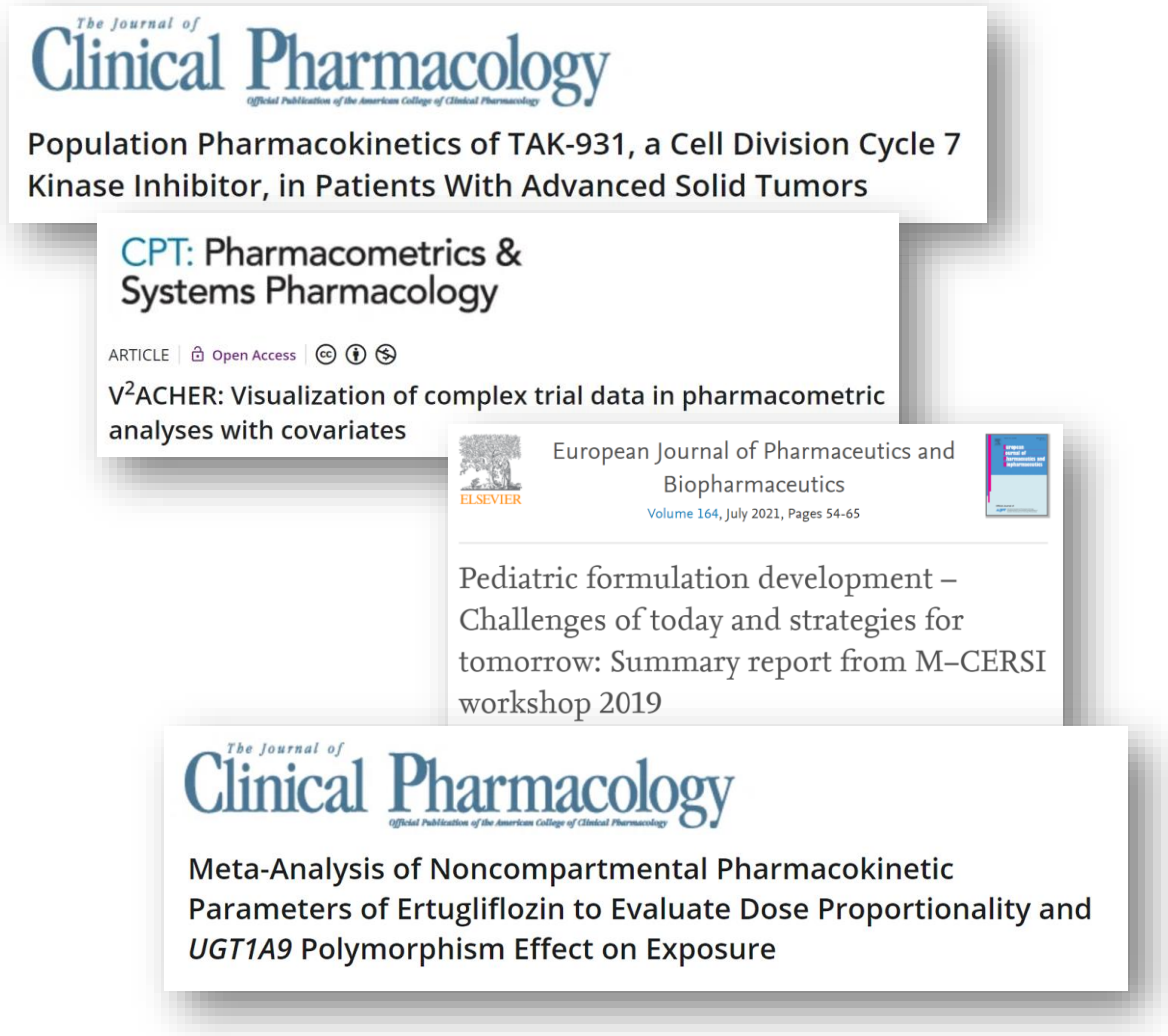
Global regulatory guidances and workshops educate industry and advance use of biosimulation

CERTARA

Growing number of publications by industry and academia







CERTARA

Powerful flywheel effect fuels momentum and adoption

Regulatory / Industry Flywheel Effect

New drug approvals incorporating **biosimulation serve as proof points** and unlock more opportunities

New technology and biosimulation models **expand use cases**

Biopharmaceutical companies **use biosimulation and technology-driven services** to accelerate R&D programs

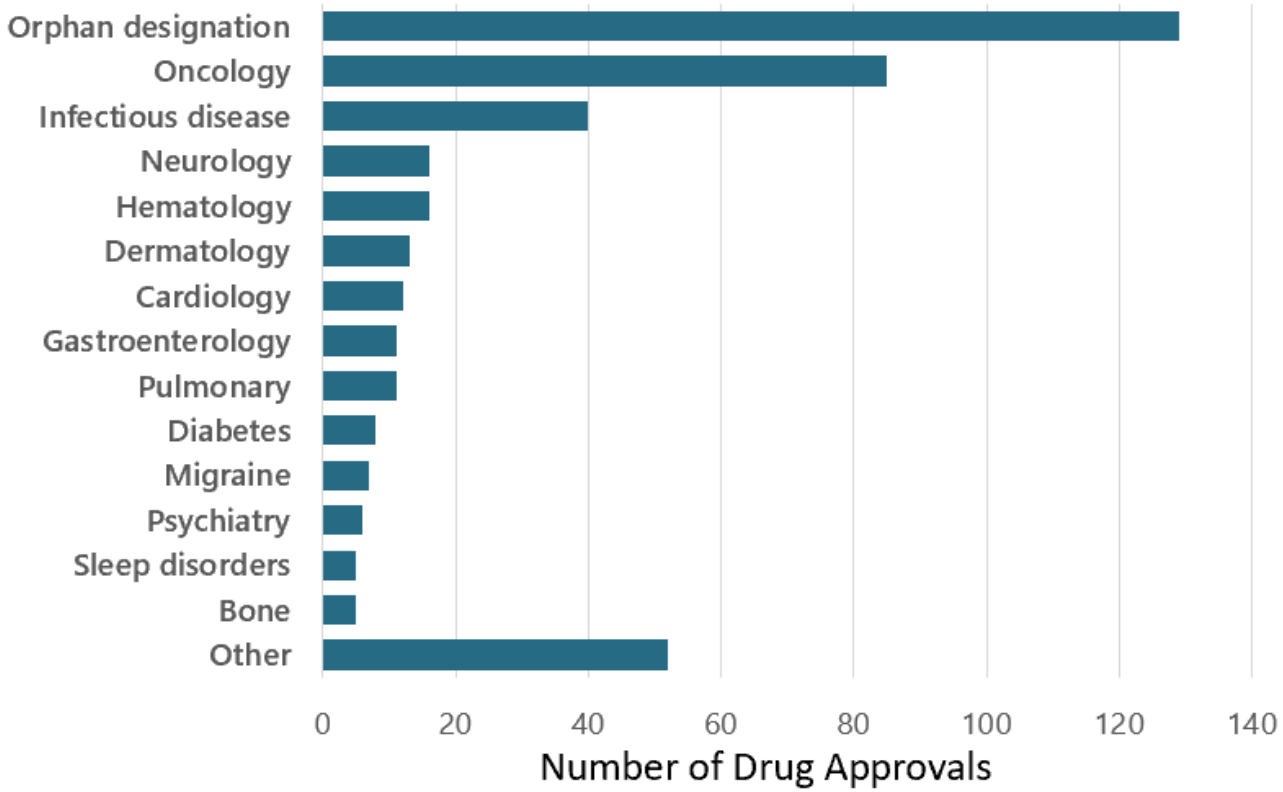
Global regulatory guidances and workshops educate industry and advance use of biosimulation

CERTARA

Drug approvals using biosimulation

Our customers, who use our software and technology-driven services, have received 90% of FDA drug approvals for 7 consecutive years.*

FDA Novel Drug Approvals Received by Our Clients 2014 - 2020



2021 Novel Drug Approvals Using Certara Solutions

illustrative examples

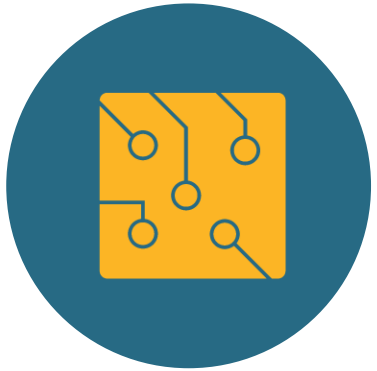
*Excludes diagnostics
Orphan designation applies across therapeutic areas

CERTARA

Disciplined, strategic approach to M&A

Proven track record of successfully acquiring and integrating businesses

Our strategy is highly disciplined and growth- and capability-focused.
We continually seek and assess a range of opportunities in:



Software and technology to build out the depth and breadth of our end-to-end platform

Services to strengthen and scale our technology-driven services and accelerate global expansion

We are uniquely well-positioned to be the acquirer of choice in the markets in which we compete.

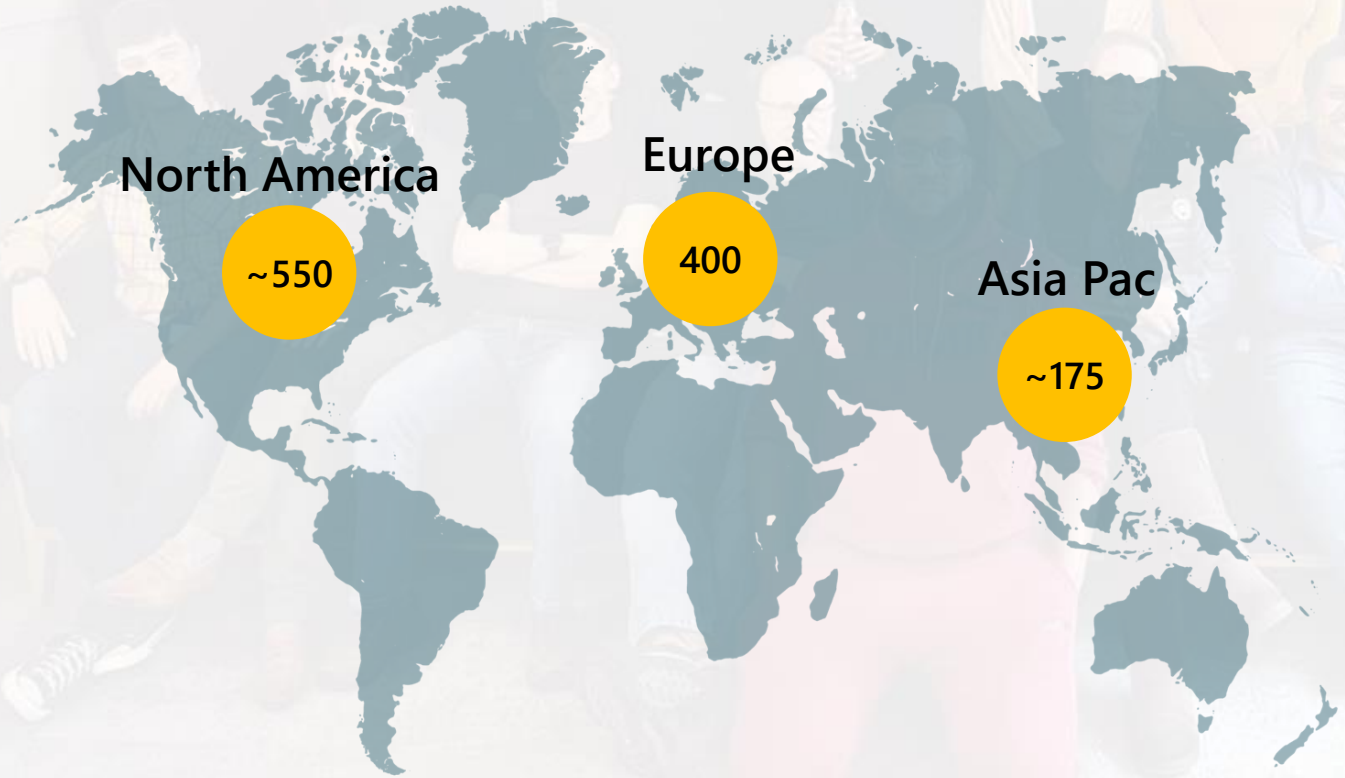
CERTARA

Diverse global team of leading experts

Diverse global team of leading experts

1,100+ employees

24% growth in people YTD



- 350+ with Ph.D.'s, Pharm.D.'s and M.D.'s
- 150+ scientific publications and presentations in 2021
- 7 of our scientists recognized as top 2% most cited

CERTARA

Proven growth strategy

Innovation

Technology leader with **90%+ renewal rate**

Land and Expand

Significant white space to **expand** with customers and **add new** ones

M&A

15 successful strategic acquisitions, **10 with software**

Global Expansion

Track record of **mid-teens** topline growth with EBITDA margins in **mid- to high-30s**

People

An employer of choice, attracting **leading experts**

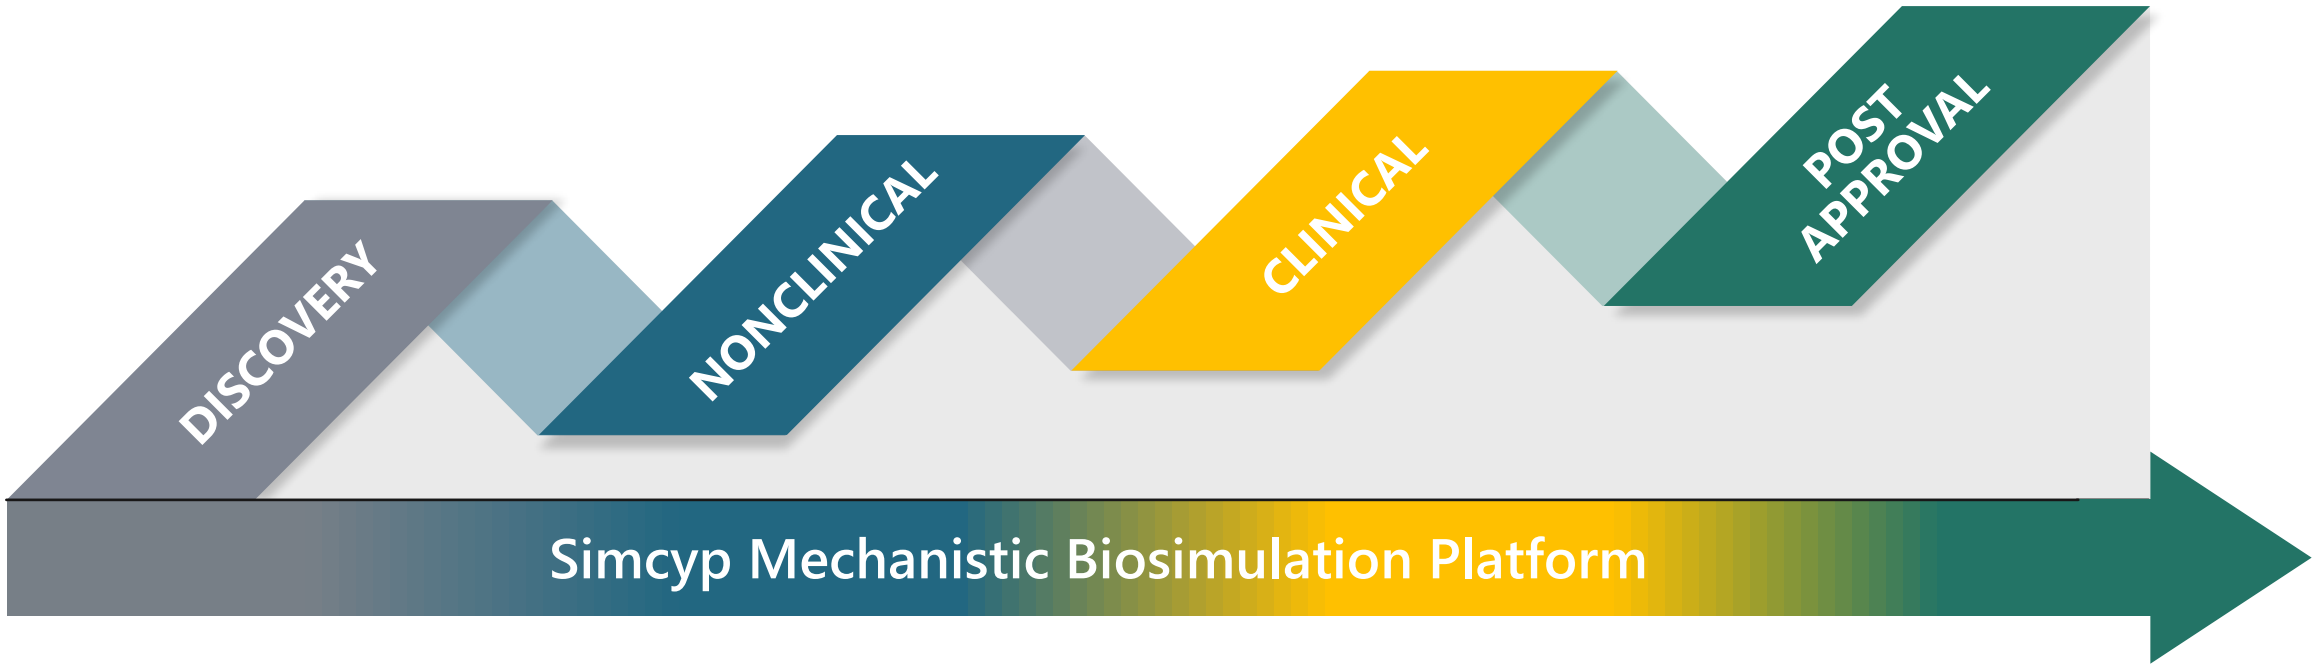
Simcyp Platform Overview

Robert Aspbury, Ph.D.

President of Simcyp

CERTARA

Simcyp platform spans discovery to post-approval support

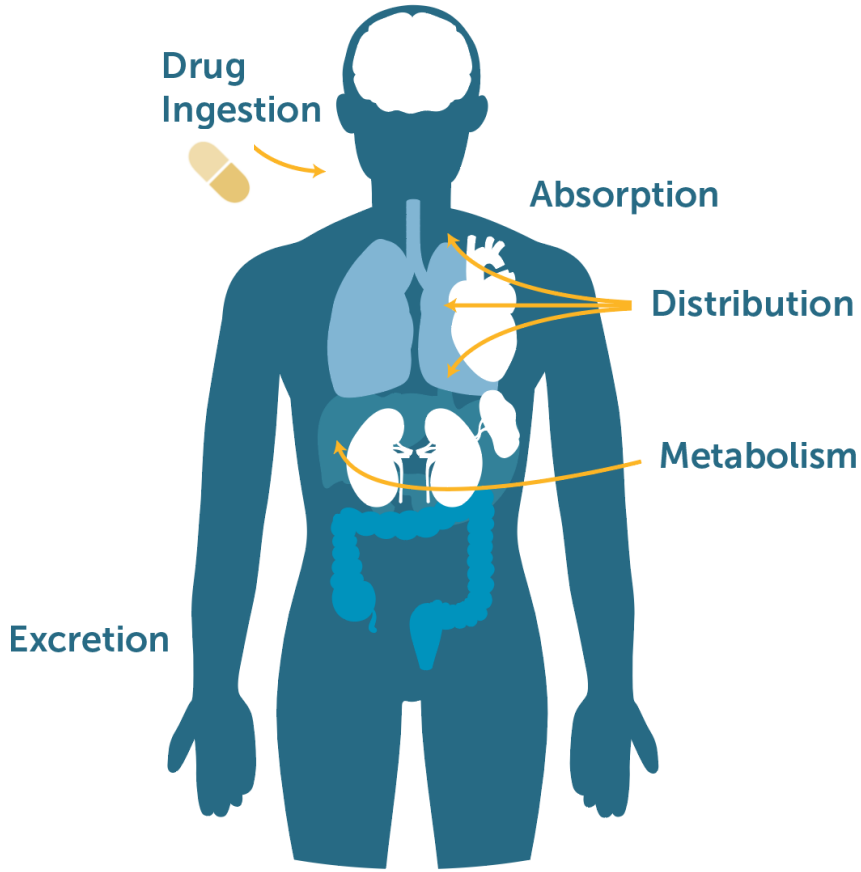


CERTARA

Mechanistic biosimulation is used to quantitatively predict, *without human or animal studies…*

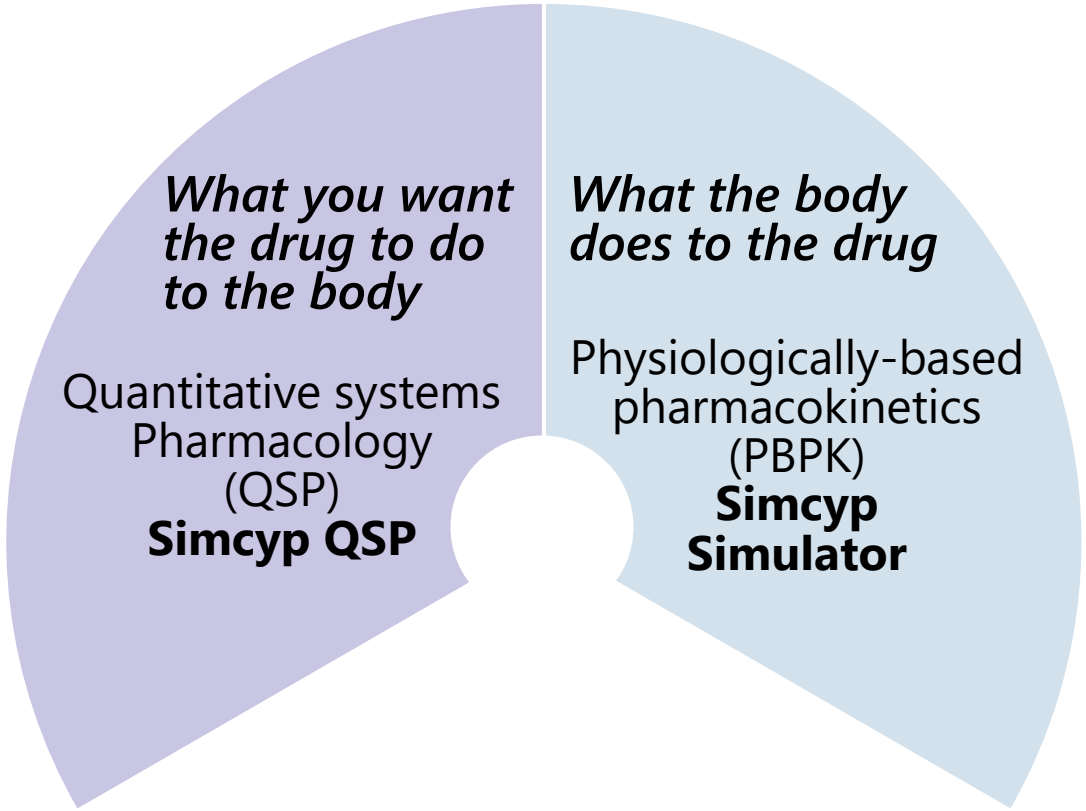
What the body does to the drug

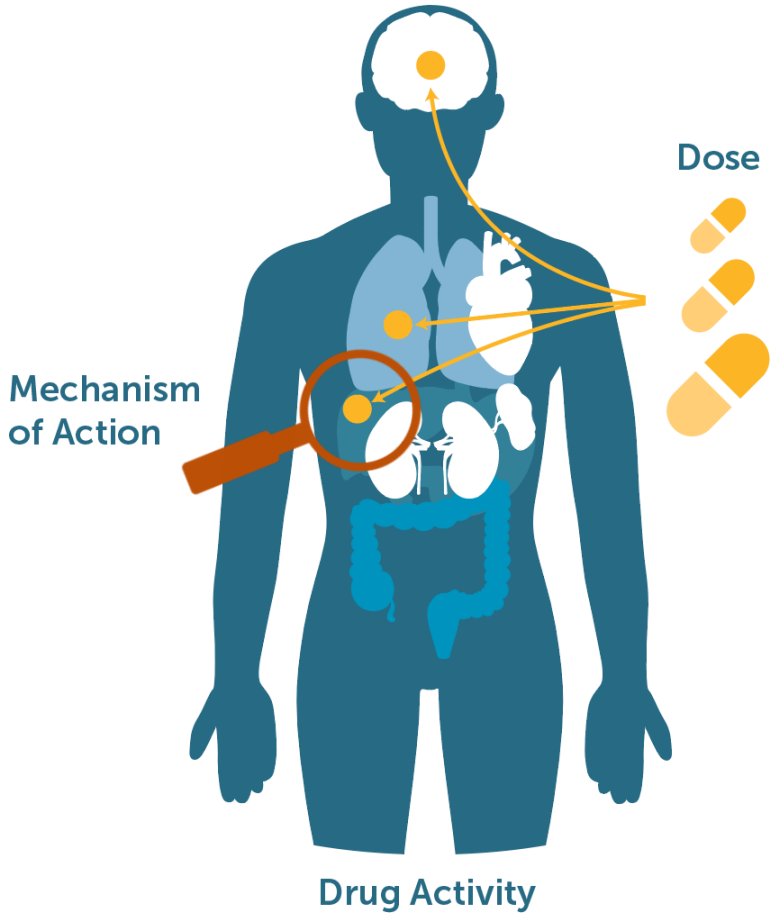
Physiologically-based pharmacokinetics (PBPK)
Simcyp Simulator



CERTARA

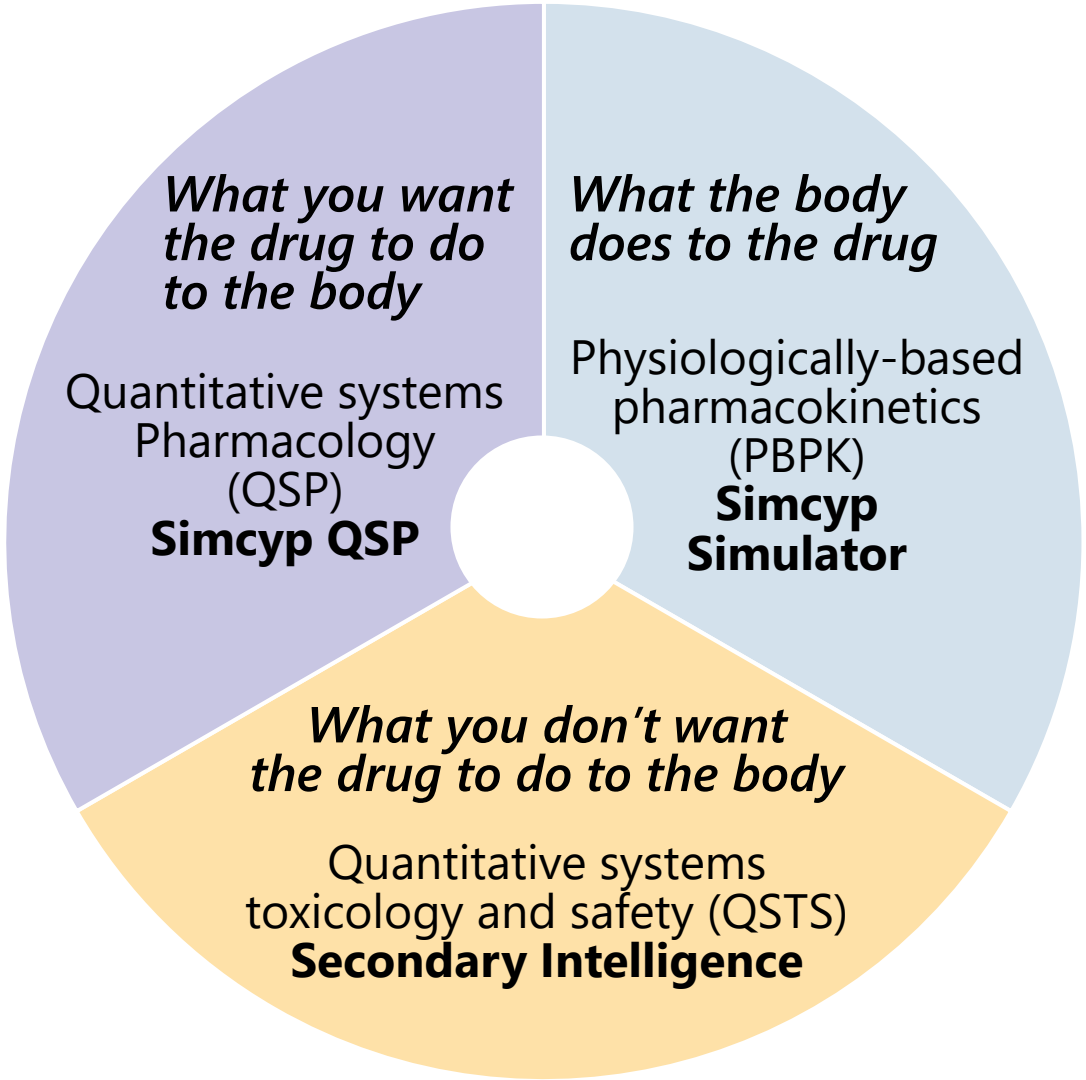
Mechanistic biosimulation is used to quantitatively predict, *without human or animal studies…*

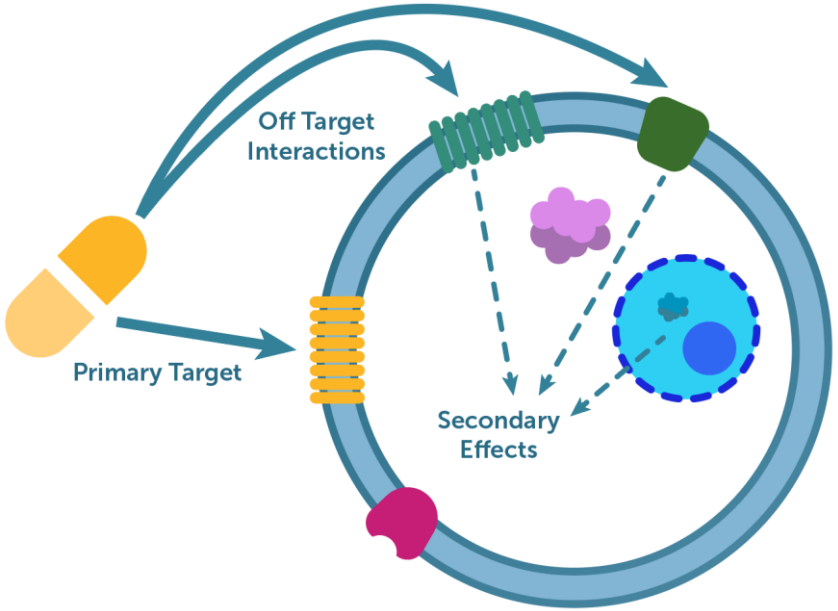




CERTARA

Mechanistic biosimulation is used to quantitatively predict, *without human or animal studies…*

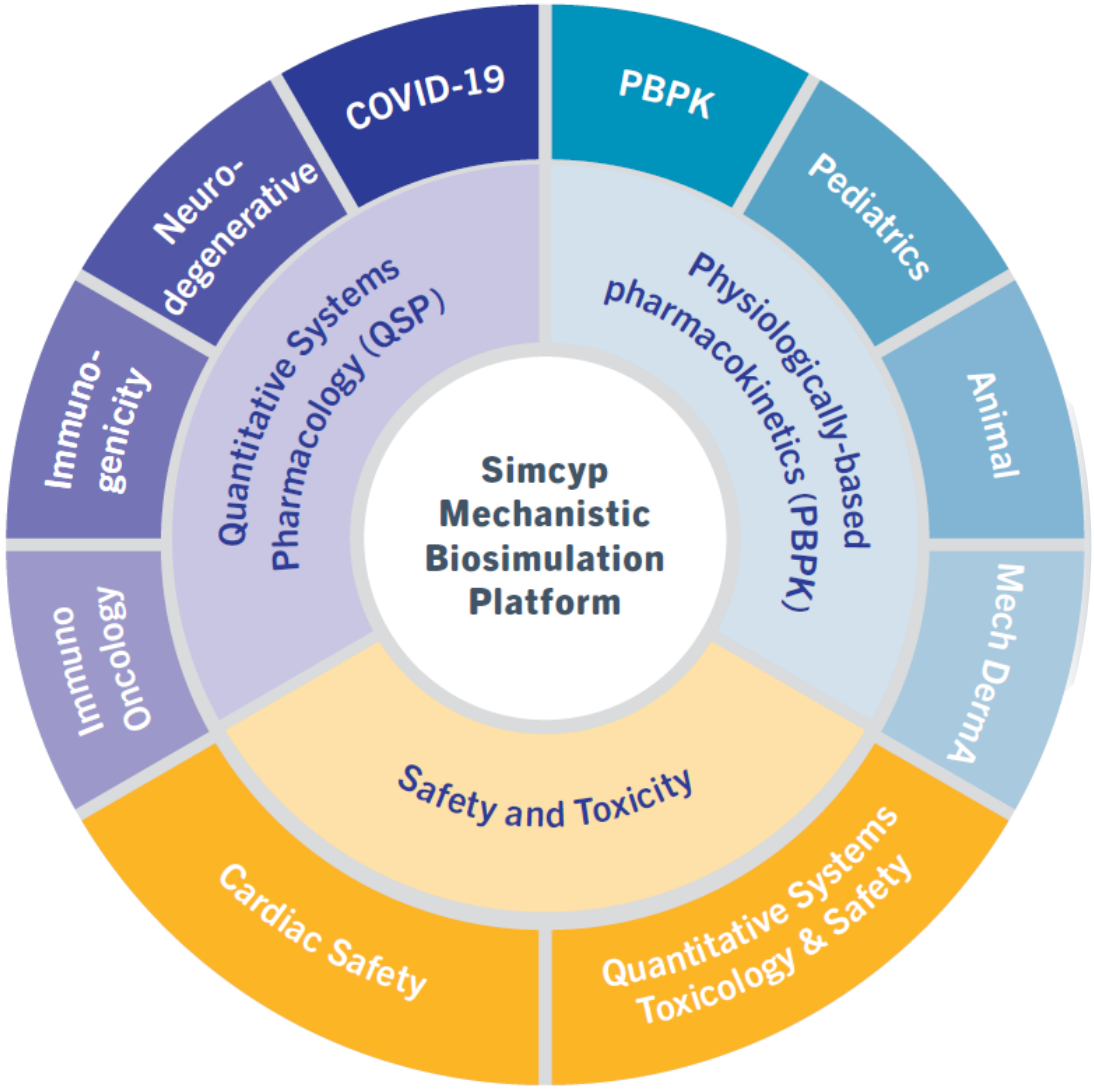




Adapted from Jenkinson et al., 2020

CERTARA

Simcyp Platform, leading mechanistic biosimulation software

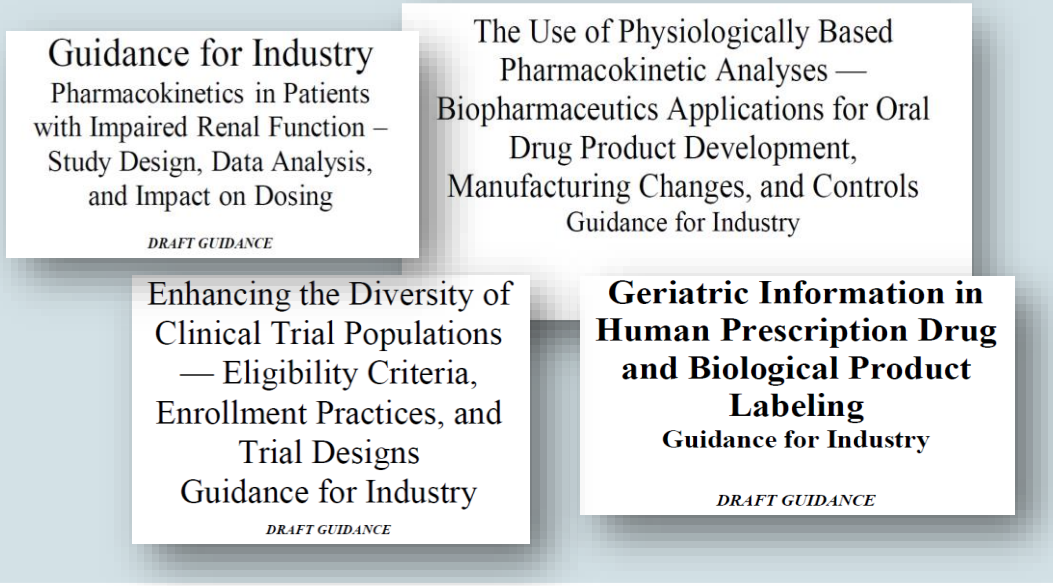


- Built upon first principles of biology, chemistry and pharmacology
- Supported FDA approval of **85+ novel drugs** with **more than 250 label claims**
- **18 of the top 20** biopharma companies by R&D spend used the Simcyp Platform in 2021
- Used by **11 global regulatory agencies**
- Recipient of FDA cooperative R&D agreement, **6** FDA grants and **7** European grants
- Drives both software and tech-driven consulting

CERTARA

Growing regulatory adoption and support

Recent FDA Guidances



European Medicines Agency Guidances

- Investigation of drug interactions
- Use of pharmacogenetic methodologies in the pharmacokinetic evaluation of medicinal products
- Evaluation of the pharmacokinetics of medicinal products in patients with impaired renal function
- Evaluation of the pharmacokinetics of medicinal products in patients with impaired hepatic function
- Role of pharmacokinetics in the development of medicinal products in the paediatric population
- Reporting the results of population pharmacokinetic analysis
- Reporting of physiologically based pharmacokinetic modeling and simulation

Japan Pharmaceuticals and Medical Devices Agency

- Population pharmacokinetic and pharmacodynamic analysis
- Exposure-response analysis of drugs
- Analysis reports involving physiologically based pharmacokinetic models
- Drug interaction for drug development and appropriate provision of information

China National Medical Products Agency

- PK/PD research of antimicrobials
- Extrapolation of adult medication data to pediatric populations
- Biostatical analysis in clinical trials
- Drug interaction
- Rare disease drug development

CERTARA

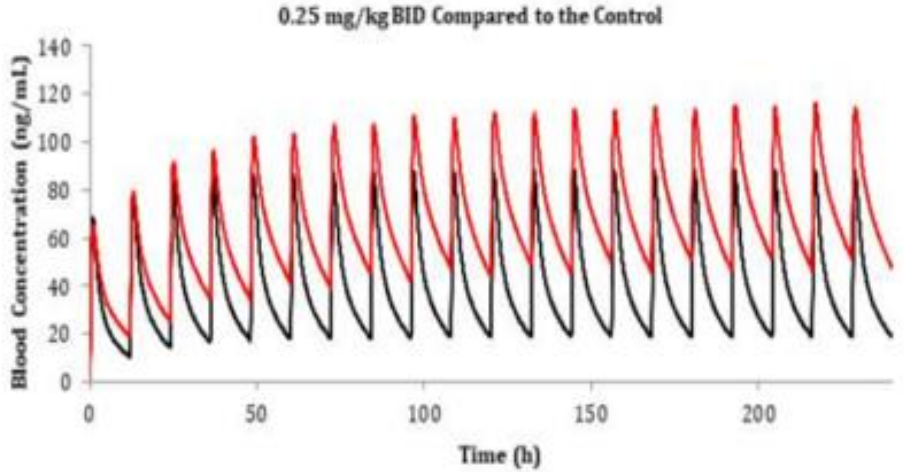
2021 novel drug approval using Simcyp Simulator

Multi-discipline Review for voclosporin
Center for Drug Evaluation and Research

All simulations were performed using the PK/PD Profiles mode in the Simcyp® Simulator (Version 17 Certara, Sheffield, UK). A scheme of the PBPK simulation strategy is shown in Figure 21, which summarizes the studies used for model development and verification, and model applications in DDI predictions.

Simcyp library files of ketoconazole, diltiazem, verapamil and nor-verapamil, fluconazole, fluvoxamine, cimetidine, rifampin MD, efavirenz, rosuvastatin and pravastatin were used for DDI simulations without any modification except that a P-gp Ki of 0.059 M was incorporated into the sim-ketoconazole 400 mg QD file and ketoconazole CL/F was reduced to 3.7 L/h (see comments in the Results section).

Simulated concentration-time profiles of voclosporin following difference dosing scenarios in the absence or presence of moderate CYP3A4 inhibitor fluconazole



Label for drug-drug interaction informed by Simcyp

----------DRUG INTERACTIONS----------

- Moderate CYP3A4 inhibitors: Reduce LUPKYNIS daily dosage to 15.8 mg in the morning and 7.9 mg in the evening. (2.5, 7.1, 12.3)
- Strong and moderate CYP3A4 inducers: Avoid co-administration. (7.1, 12.3)
- Certain P-gp substrates: Reduce dosage of certain P-gp substrates with a narrow therapeutic window when co-administered with LUPKYNIS. (7.2, 12.3)

https://www.accessdata.fda.gov/drugsatfda_docs/nda/2021/213716Orig1s000MultidisciplineR.pdf

CERTARA

3 areas of significant impact with Simcyp Simulator

Clinical Trial Waivers

Extrapolation to Special Populations

Reduction in Study Patients

CERTARA

Regulatory priority to increase access to generics

Simcyp Simulator can advance development of complex generics

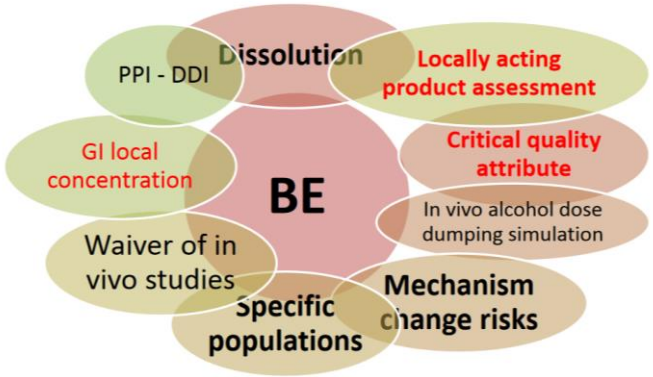
Increasing Access to Generic Alternatives for Complex Drugs

Importance to FDA

FDA supports the development of generic versions of complex drug products because they represent nearly one-third of drug products currently used but have less generic competition than non-complex drugs. The presence of generic drugs on the market helps to ensure availability of quality medicines at a lower cost to the American public.

2021 Advancing Regulatory Science at FDA

General PBPK Model Applications for Generic Products



Increasing trends in using PBPK models to support regulatory decision making in the realm of generic drug development

Zhao, Generic Drug Research Public Workshop May 2017, MD, USA

Milestone FDA Approval of Diclofenac Gel

First complex generic approved using the Simcyp Simulator to establish *virtual bioequivalence in lieu of a clinical trial, saving significant time and money.*

Research Highlight

Physiologically-based pharmacokinetic modeling supported approval of a locally acting drug based on an efficient alternative bioequivalence approach.

CERTARA

Emerging technologies in biosimulation

CERTARA

Platform approach to quantitative systems pharmacology

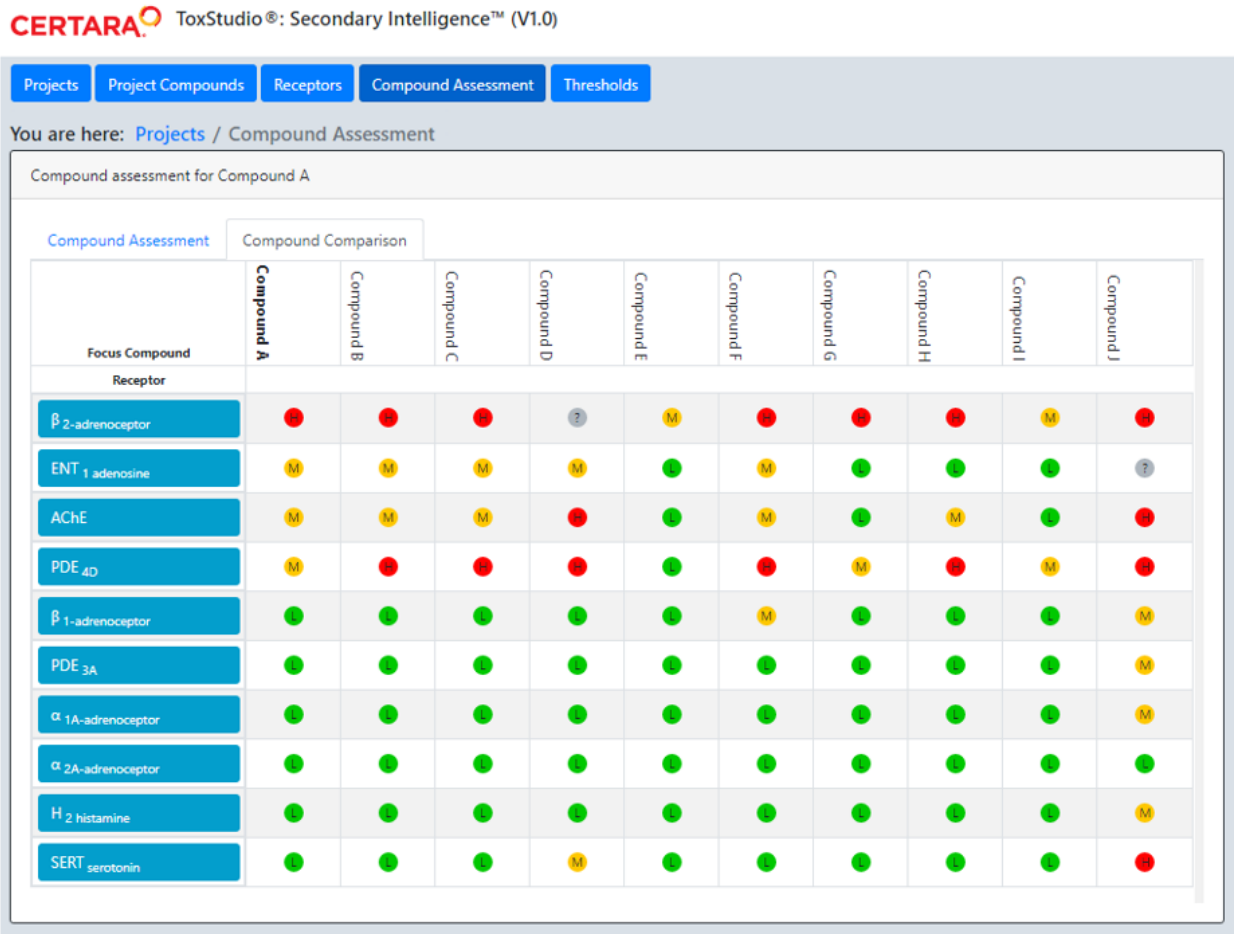
QSP combines computational modeling and experimental data to examine the relationships between a drug, the biological system and the disease process.

Immunogenicity	Immuno-oncology	Vaccines	Neurodegenerative diseases	Gene therapies
				
Increasing complexity				
• Monoclonal antibodies • Bi-specifics • Complement system • Neuro-immunity	• Combination therapies • IL-2 • TIGIT • CAR T-cell therapies	• COVID vaccines • Respiratory syncytial vaccine • Oncology vaccine	• Alzheimer's • Parkinson's • Multiple sclerosis • Schizophrenia	• AAV vector delivery • Hemophilia • Fabry disease • Gaucher disease

CERTARA

Addressing safety issues consistently and earlier

Secondary Intelligence v1



- Toxicology and safety pharmacology impact organ-specific drug exposure
- Biosimulation tools can simulate and predict safety issues
- More efficient and consistent than traditional method
- Reduction in animal use
- Relevant for adjacent industries

CERTARA

Simcyp Simulator Demo

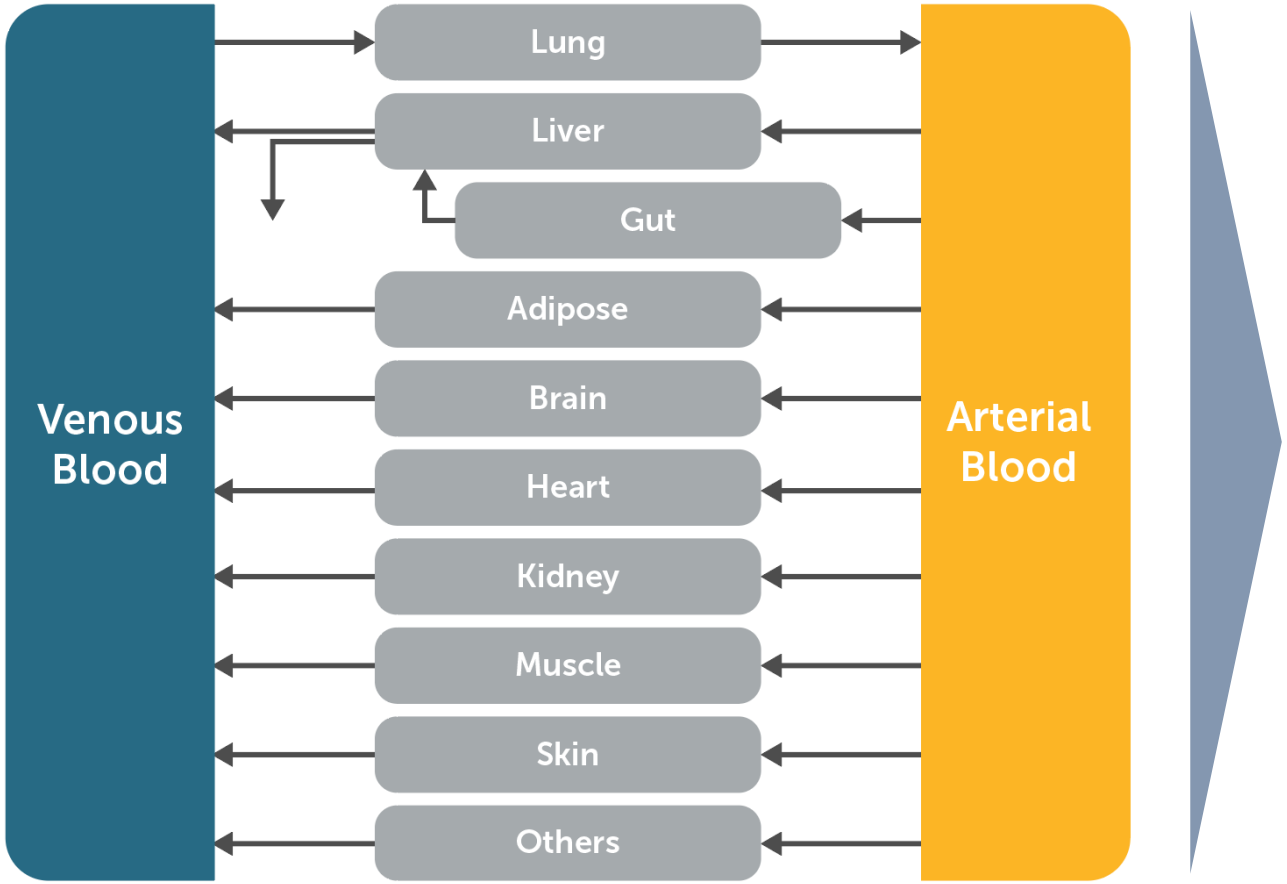
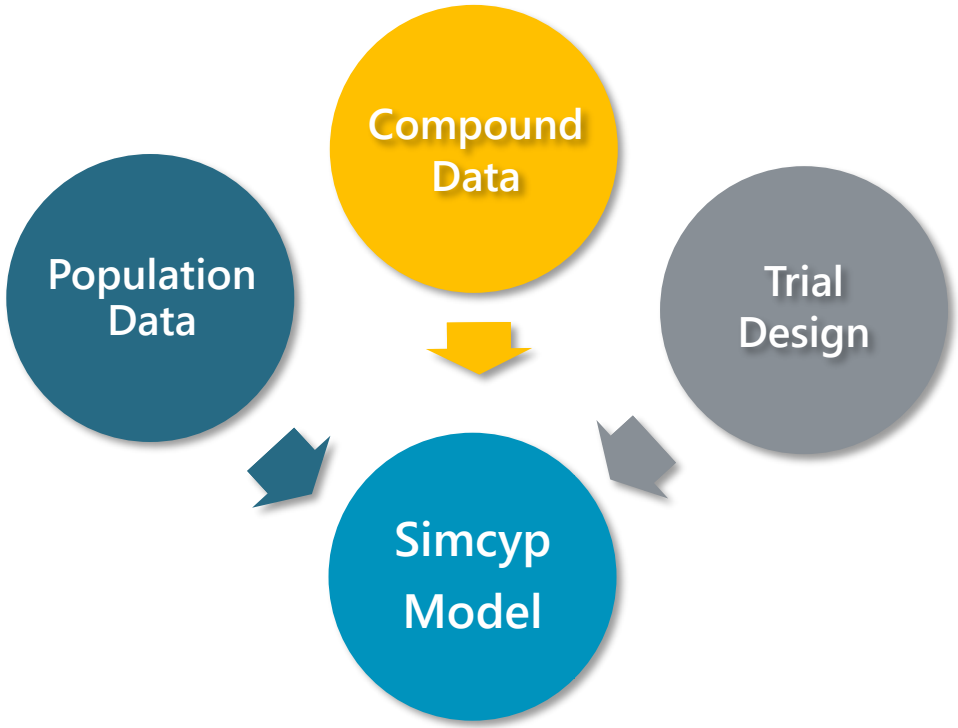
CERTARA

Simcyp Simulator framework with virtual patients

10 Advanced Mechanistic Organ Models



Simcyp Simulator Model Structure



CERTARA

Numerous applications across R&D lifecycle

Discovery/Nonclinical

- Animal to human extrapolation
- Early formulation assessment
- Early drug interaction risk assessment
- First-in-human dose prediction

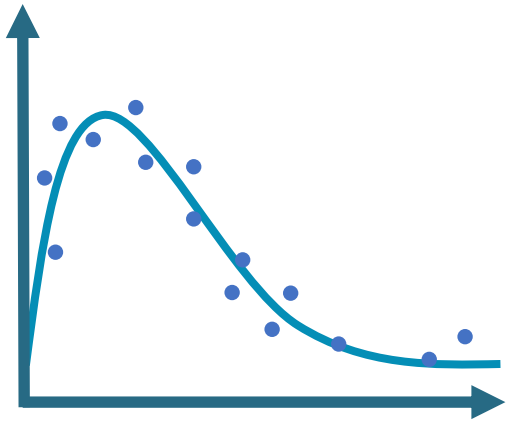
Early Development

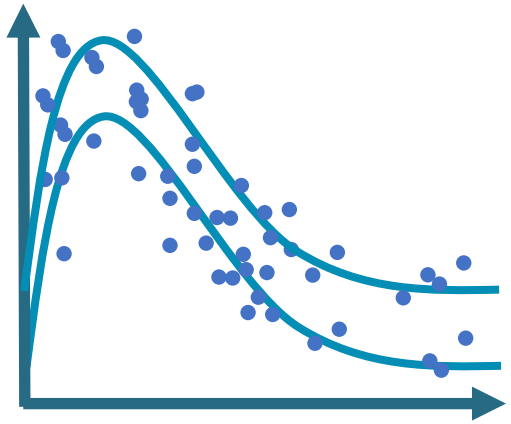
- First-in-human single/multiple dose exposure
- Drug-drug interactions
- Absorption, food effect and formulation modelling

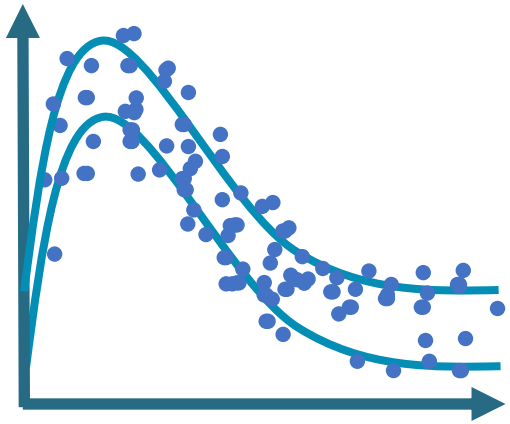
Late Development

- Drug-drug interactions
- Pediatric and special populations
- Organ impairment modelling
- Label claims in lieu of clinical study

"Learn and confirm" with continuous Model Refinement, Verification and Validation



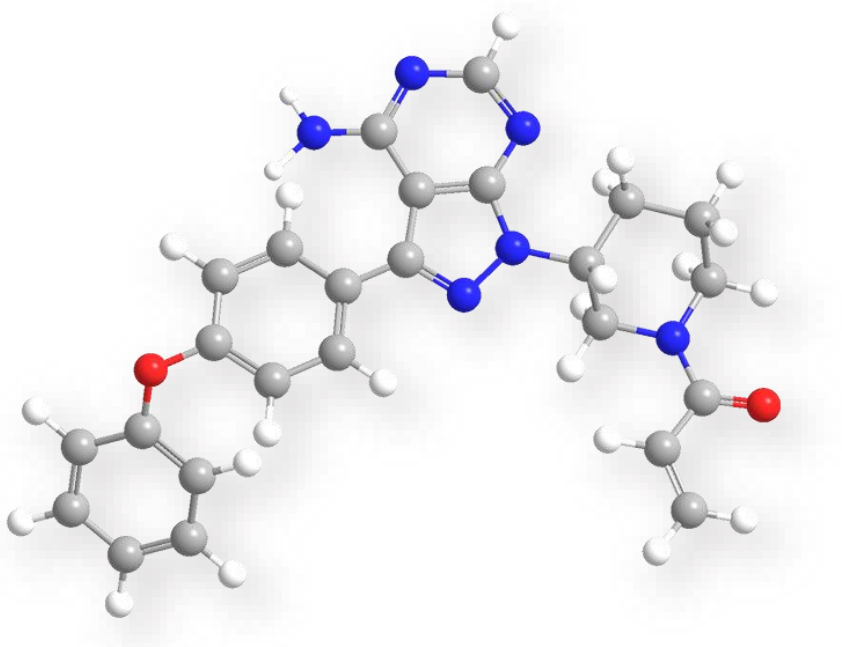




CERTARA

Ibrutinib case study using Simcyp Simulator

Ibrutinib for the treatment of mantle cell lymphoma



Source: American Chemical Society

Simcyp Modelling Strategy

Simcyp model developed in healthy adults using lab and clinical data

↓

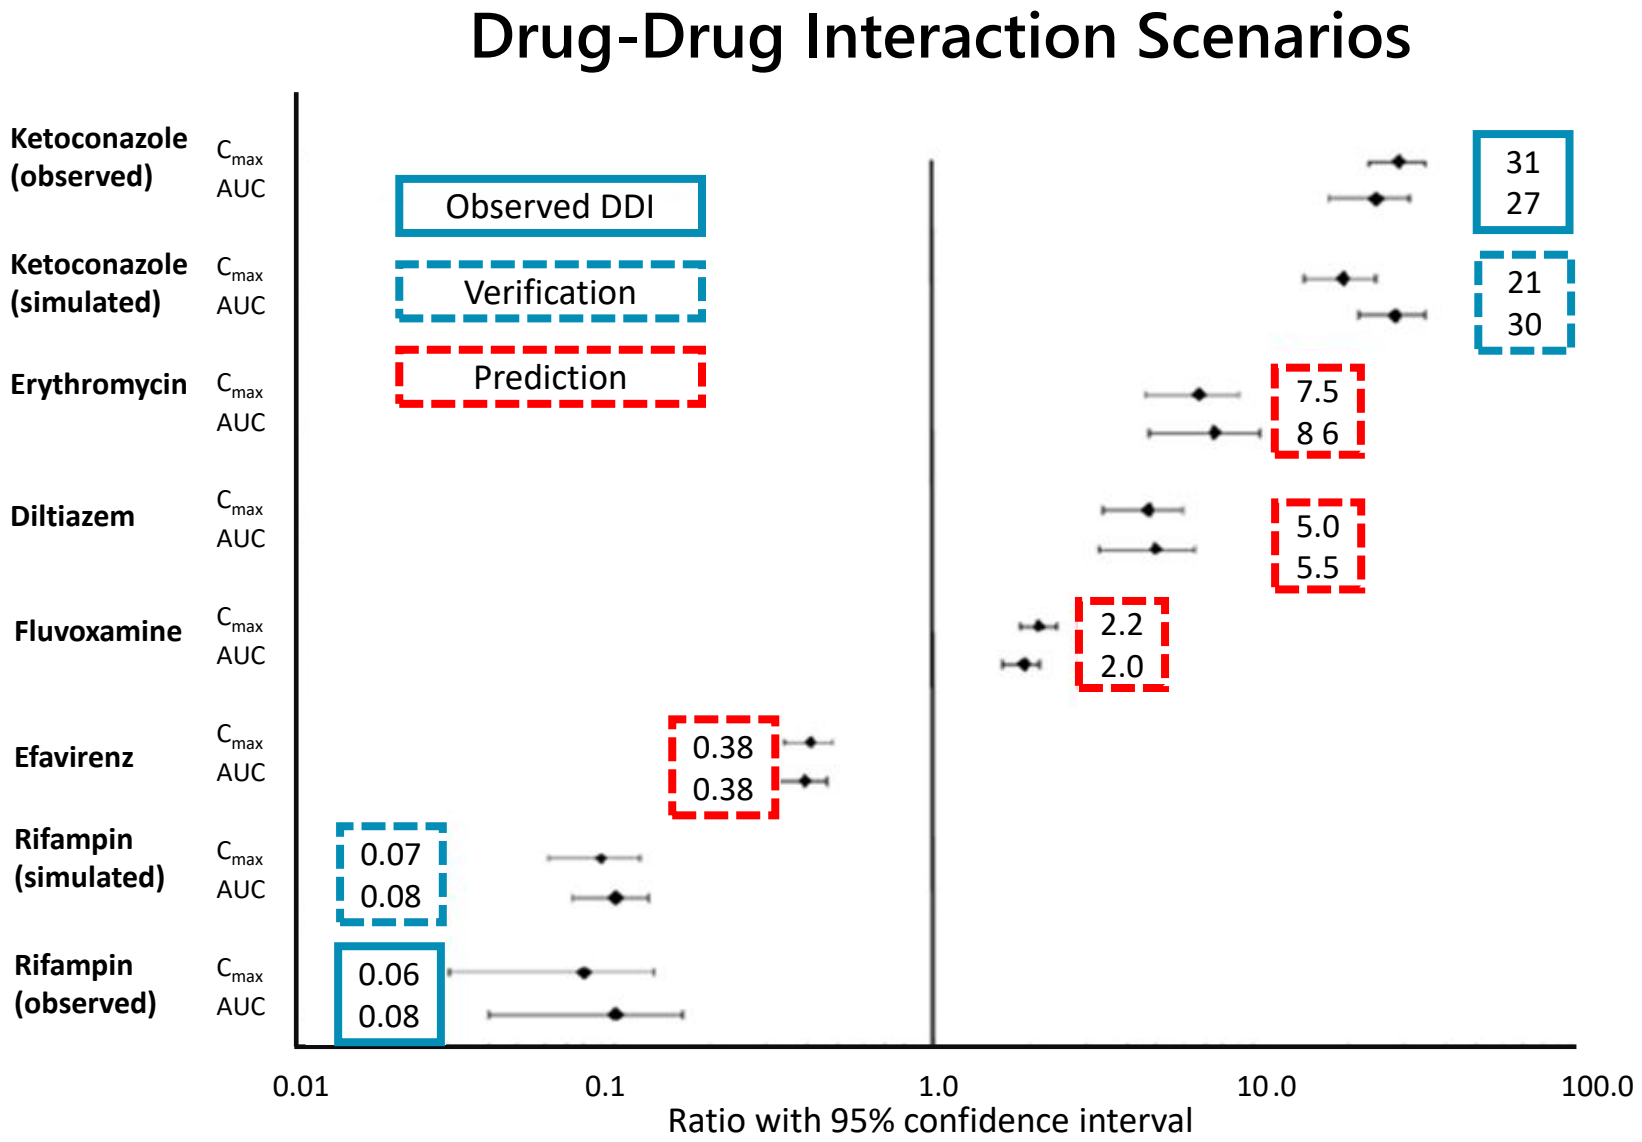
Simcyp model verified using clinical data with strong CYP3A4 inhibitor & inducer

↓

Simulated DDI with moderate CYP3A4 inhibitors & inducers in cancer patients -> recommended dose adjustments

CERTARA

Ibrutinib model predicted untested scenarios



The Simcyp Simulator accurately predicted observed drug interactions and was used to study new scenarios, avoiding several DDI studies.

CERTARA

Ibrutinib model used to inform dose adjustments in label

"The simulations of PBPK model provided a dose optimization strategy for combined use of ibrutinib with specific CYP3A inhibitors or inducers."

- from the FDA label report, June 28, 2013

CYP3A modulators	Goal	CYP3A interaction mechanisms of co-medications	Ibrutinib dosing
Inhibitors	Simulated ibrutinib exposure vs. that of 560 mg without inhibitor should be <2 fold	Strong, reversible, minimal accumulation (e.g. ketoconazole)	Reduce to 140 mg and give 2 hours before inhibitor
		Strong, time-dependent (e.g. ritonavir)	Do not use
		Moderate	Reduce to140 mg
Inducers	Simulated ibrutinib exposure vs. that of 140 mg without inducer should be >1	Moderate	No dose adjustment
		Strong	Do not use

Track record of scientific and regulatory milestones

- First PBPK workshop to FDA
- First FDA approval with virtual bioequivalence for complex generic
- First FDA acceptance of Simcyp simulation in lieu of DDI trial
- Gene therapy regulatory submission with QSP
- Simcyp used to enable drug to come off FDA clinical safety hold
- COVID-19 Vaccine Model wins R&D 100 Award

Yesterday

- Drug-drug interaction model

Accelerating patient safety narratives with technology

Patient safety narratives are critical to clinical study reports

- Summary of adverse events that occurred with a patient
- Required in all clinical phases across every therapeutic area

3 Key Challenges in the Narrative Process

Quality

Speed

Scale

Synchrogenix Writer automates and accelerates the patient safety narrative process.

Certara's regulatory team uses **Synchrogenix Writer** to generate quality narratives at speed and scale for many of our biopharmaceutical clients.

CERTARA

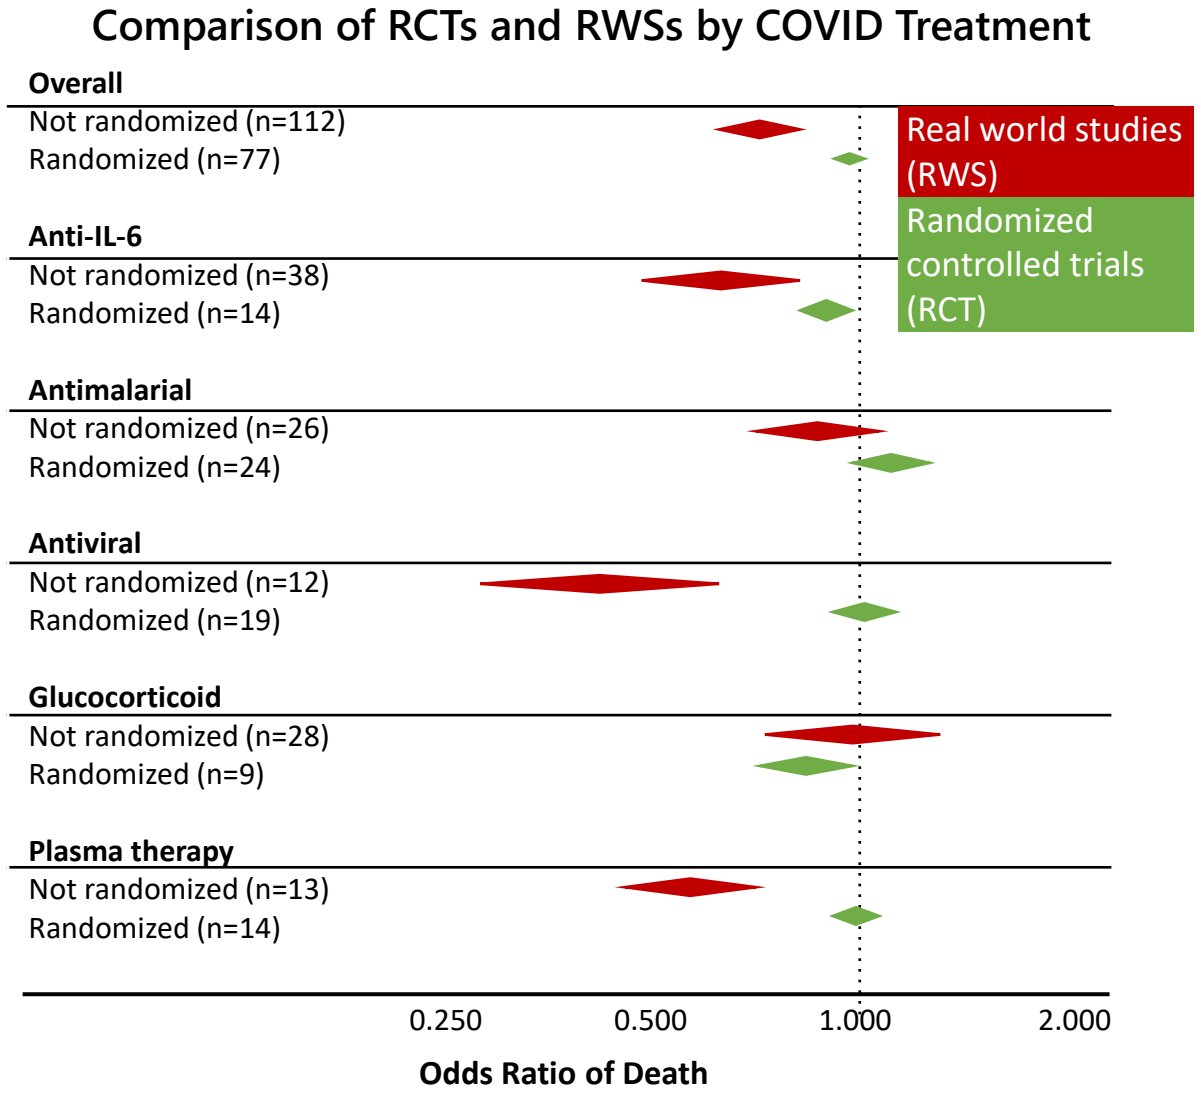
CODEx for model-based meta-analysis (MBMA)

- CODEx Databases cover more than 55 therapeutic areas and 10,000+ studies
- Influences critical decisions in drug development
- Used by 9 out of the top 15 global biopharmaceutical companies

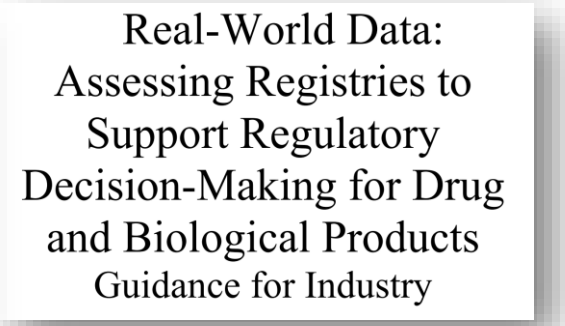
CERTARA

Insights from the COVID-19 CODEx database

Funded by the Bill and Melinda Gates Foundation, now includes 482 COVID-19 trials and real-world studies



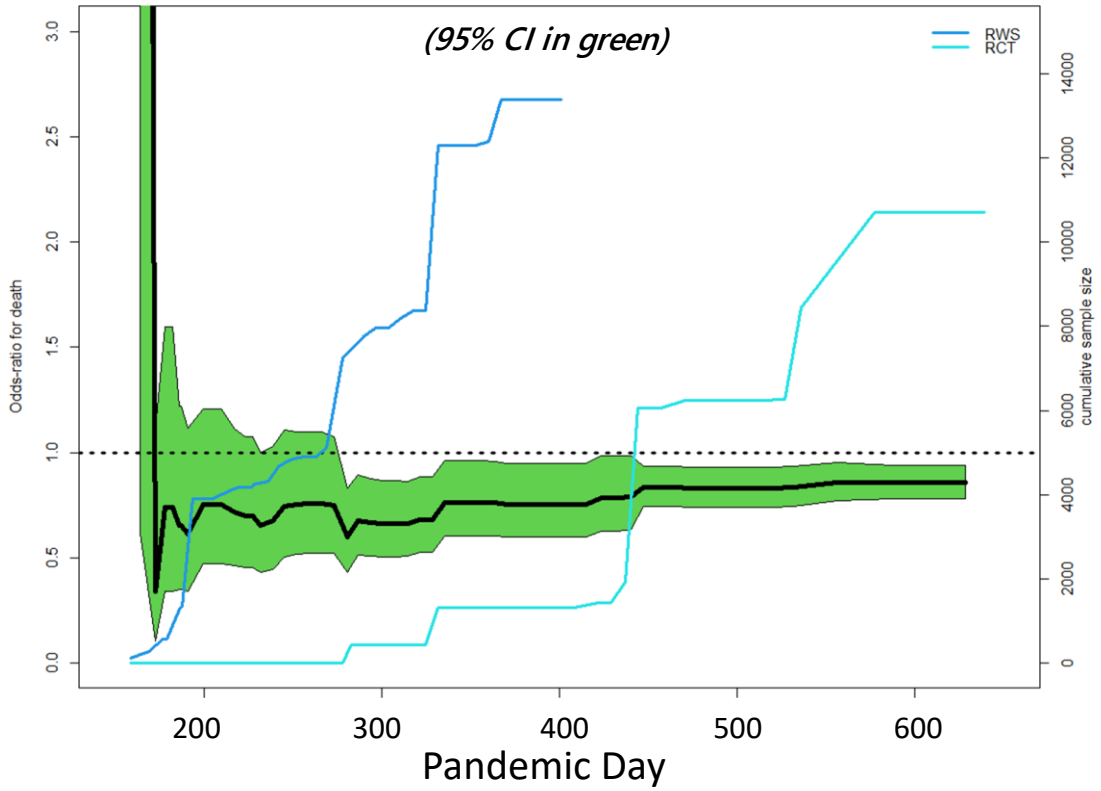
- Real world studies overestimated COVID treatment effects compared to randomized controlled trials
- Sheds important insights on how to bridge between real world studies and RCTs
- Valuable across all areas from rare diseases to viral pandemics
- CODEx can be used to create synthetic control arms
- Growing regulatory support for real-world evidence



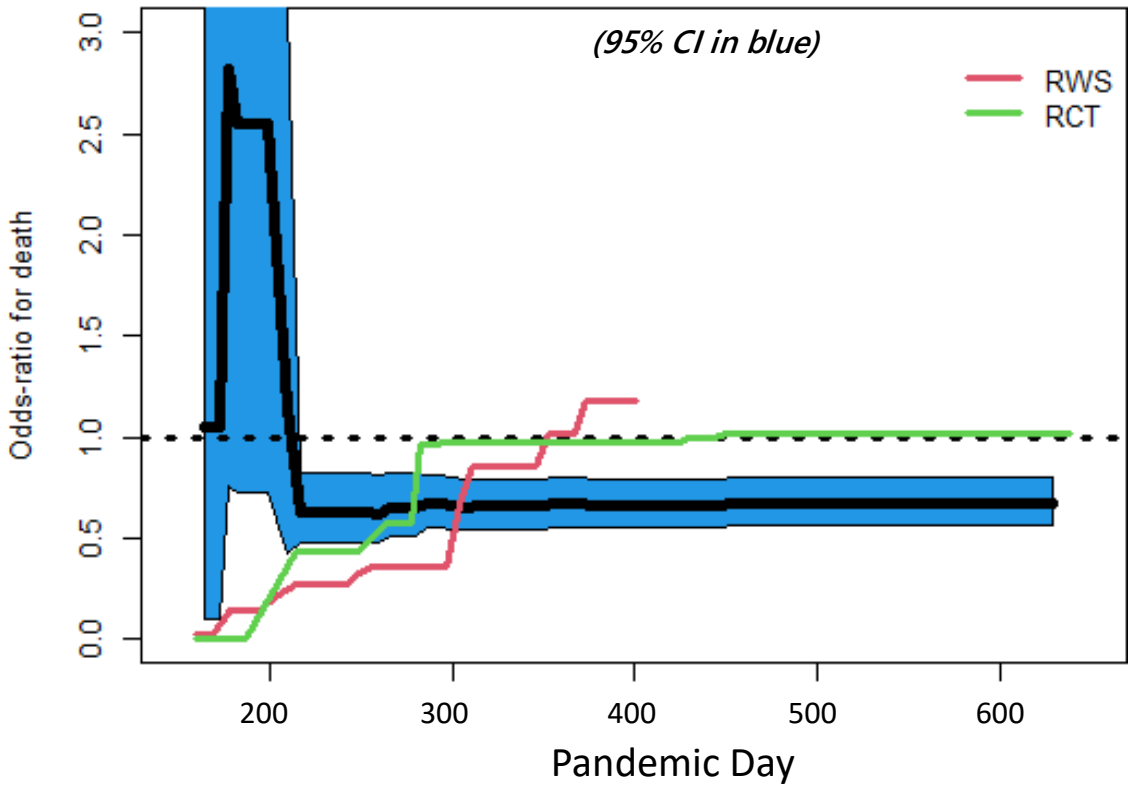
CERTARA

Tale of two COVID-19 repurposed therapies

Learning on Anti-Interleukin-6



Learning on Glucocorticoids (critical/severe patients)



For new drugs to be commercially successful, they must differentiate themselves from the standard of care.

Model-based meta-analysis using **CODEx** can help predict how a new drug's safety and efficacy profile might compare to competitor drugs, informing critical go/no-go decisions.

Advancing a novel, rare pediatric drug to FDA approval

Mirum, a start-up biotech, needed support to advance maralixibat, its novel therapy aimed at treating a rare pediatric disease, and chose to partner with Certara.

- Clinical pharmacology
- Clinical protocol design
- Regulatory strategy
- Non-compartmental PK analysis
- **Phoenix Software**
- Represent client at FDA meetings
- Drug interaction modeling
- **Simcyp Simulator**
- Regulatory submission

- Approved by the FDA as the **first and only medication** for the treatment of cholestatic pruritus in patients with Alagille syndrome 1 year of age and older
- Client received a **rare pediatric disease priority review voucher**
- More than **35 scientists and regulatory experts** at Certara contributed to this program

Virtual drug development for a neglected, tropical disease

Certara formed a **virtual drug development team** with Medicines Development for Global Health to work on **moxidectin**, a treatment for onchocerciasis or river blindness. **River blindness** is the second leading cause of infectious blindness, affecting at least **25 million** people worldwide.

- Drug development and regulatory strategy
- Population PK/PD analysis and NCA
- **Phoenix Software**
- Clinical pharmacology
- Clinical trial design
- Epidemiology modeling

- Approved by the FDA as the **first medication in 20 years** to treat patients 12 and older
- Client received a **tropical disease priority review voucher**

Acquisition of Pinnacle 21, a leader in data standardization software

- Closed acquisition on 10/1 for purchase price of $310M with approximately $250M in cash consideration and 2,239,717 shares of Certara restricted common stock
- Estimated 2021 pro forma revenue of $23-24M, contributing $6M in 4Q21
- Accretive to revenue and adjusted EBITDA
- 57 employees and ~70% are software developers and data standards experts
- Pinnacle 21 Enterprise Software
  - >130 customers, including **22 of top 25** leading biopharma companies
  - Average annual customer subscription value **>$100k** in 2020 and growing
  - **94%** aggregate renewal rate in 2020

$300M
Total Addressable Market(1) for CDISC Compliance Software

12%–15% CAGR
(2022–2026)

Expecting 2022 Pinnacle 21 revenue of $28-31M
and adjusted EBITDA of $12 - 13M (~43% EBITDA margin)

1.Internal estimate based off of commissioned market research
We have not reconciled the adjusted EBITDA and adjusted EIBTDA margin above to the most directly comparable GAAP measures because this cannot be done without unreasonable effort due to the variability and low visibility with respect to costs related to acquisitions, financings, and employee stock compensation programs, which are potential adjustments to future earnings. We expect the variability of these items to have a potentially unpredictable, and a potentially significant, impact on our future GAAP financial results.

FASB final guidance no longer requires purchase accounting adjustment

- Subsequent to our third quarter earnings release, the FASB issued final guidance that requires companies to apply ASC 606 to recognize and measure contract assets and liabilities from contracts with customers acquired in a business combination. This creates an exception to the general recognition and measurement principle in ASC 805.
- As a result, companies will recognize contract assets and contract liabilities at amounts consistent with those recorded by the acquiree immediately before the acquisition date.
- The standard is effective for fiscal years beginning after December 15, 2022; however, Certara will early adopt the standard for fiscal year 2021.

No deferred revenue valuation adjustment will be required, and Certara will not be providing guidance or report an Adjusted Revenue metric

CERTARA

2022 Outlook

Certara Initiates 2022 Guidance

Revenue
$350-$370M

Adjusted EBITDA(1)
$127-$135M

Adjusted Diluted EPS(1)(2)
$0.48-$0.53

20-25%
YoY growth

36-37%
EBITDA Margin

This financial guidance was provided as of December 15, 2021, and its inclusion in this presentation should not be construed as continued affirmation of such guidance beyond that date.

(1) We have not reconciled the adjusted EBITDA and adjusted diluted EPS forward-looking guidance above to the most directly comparable GAAP measures because this cannot be done without unreasonable effort due to the variability and low visibility with respect to costs related to acquisitions, financings, and employee stock compensation programs, which are potential adjustments to future earnings. We expect the variability of these items to have a potentially unpredictable, and a potentially significant, impact on our future GAAP financial results.

(2) The company is planning to revise the calculation of adjusted eps to exclude amortization expense related to M&A. Amortization related to P21 estimated based on preliminary purchase accounting valuation to be updated before year end.

(3) Pinnacle21 Goodwill Amortization which will provide a cash tax benefit of approximately $500K per year

Key Assumptions 2022 Guidance

- Revenue growth excluding Pinnacle 21 expected to be **12-17%**
- Fully diluted shares expected to be in the range of **156-158M**
- GAAP tax rate expected to be in the range of **40-45%**
- Cash tax rate expected to be **20-25%**(3)

CERTARA

Notes to Reconciliations

(a) Represents amounts as determined under GAAP.

(b) Represents expense related to equity-based compensation. Equity-based compensation has been, and will continue to be for the foreseeable future, a recurring expense in our business and an important part of our compensation strategy.

(c) Represents costs associated with mergers and acquisitions and any retention bonuses pursuant to the acquisitions.

(d) Represents integration costs related to post-acquisition integration activities.

(e) Represents costs associated with directly expensed costs from the secondary offerings and debt modification.

(f) Represents charges for severance provided to former executives and non-executives.

(g) Represents expense related to reorganization, including legal entity reorganization.

(h) Represents the gain/loss related to disposal of fixed assets.

(i) Represents recruiting and relocation expenses related to hiring senior executives.

(j) Represents the first year Sarbanes-Oxley costs for accounting and consulting fees related to the Company's preparation to comply with Section 404 of the Sarbanes-Oxley Act in 2021.

(k) Represents the income tax effect of the non-GAAP adjustments calculated using the applicable statutory rate by jurisdiction.

(l) Represents potentially dilutive shares that were excluded from the Company's GAAP diluted weighted average shares outstanding because the Company had a reported net loss and therefore including these shares would have been anti-dilutive.
